Editorial

We face another bull selling season with our northern industry still recovering from the impact of the Government imposed suspension of the live export trade with Indonesia in June last year.

It was interesting to note the remaining quota for this year of 98,000 head was released earlier than expected in response to rising beef prices in Indonesian markets. From all reports beef prices have continued to rise, increasing by 20% in the last month because of reduced supply and large sections of traditional beef trader areas of wet markets remaining vacant.

It is of some comfort to know that the real demand for beef is still evident in the market when the access issues can be resolved and the ability of local supply to contribute to self-sufficiency may be an over estimate.

We are fortunate most of the northern areas have experienced an excellent season providing the opportunity for many producers to re-build female numbers.

While these better seasons have been good, it has also given our competitors an opportunity to sell promises trading off the adaptability of Brahman base herds.

We have proven no other breed can match Brahmans, survival, feed efficiency credentials and profitability on grass.

The success of the Ascot Brahman Stonegrill at Beef 2012 showed clearly that Brahman cattle can meet MSA specifications with 100% grading MSA and 92 of 94 into boning group 1 or lower and 36 in boning group 6-8.

In future we will be much better able to confront challenges if we have more evidence of our genetic progress in the traits other than survival and adaptability.

The tools are available through the Breedplan system to do this and hopefully the gene marker technology will make a contribution but it won’t work if it is not used.
President’s paragraph

I would firstly like to thank the members of our Australians delegation to the World Brahman Congress in Panama for their contribution to promoting our breed and association and congratulate them on a job well done.

It was an enjoyable experience and we all gained a different appreciation of the value of time. A more detailed report has been included in this issue of Brahman News.

The next World Brahman Congress will be in South Africa in September 2014.

We will be looking to once again take a delegation to promote our breed and our out 2016 World Congress.

We have started the process of organising the Congress and we would welcome any suggestions members may have for things to go in the Congress programme.

Our previous 2 Congresses in 1983 and 2002 were very successful promotions and we want to ensure we keep up the standard.

Congratulations to the Rockhampton Junior Beef Show Committee on another successful event held in the first week of the school holidays. With over 100 participants again this year it is certainly one of the largest events of this type in Queensland and it was pleasing to see a lot of new faces this year.

While the situation with live exports to Indonesia is far from resolved it is interesting to note the media reports that the beef price in Indonesia is increasing, pointing to a very tight supply situation.

We can only hope that this will lead to an increase in permit numbers in the next round of permit allocations.

I would like to wish members all the best for the spring bull sale season and hopefully their own promotional efforts will be well rewarded.

Finally I would like to remind members, our Annual General Meeting is on Sunday, September 30 at 1.00pm.

I hope to see as many members as possible there.

Andrew Olive

Heavyweight result for Whitaker Mr Avo in Brisbane

The sheer “weight, volume and capacity” of Whitaker Mr Avo impressed the judges and the crowd alike at the 2012 Royal Queensland Show in Brisbane, the impressive grey bull walking away with the highly coveted senior and grand bull championships.

The 36-month-old was the heaviest Brahman on the ground, weighing in at 1074kg and boasting an eye muscle area of 145 sq cm.

Judge Matthew McCamley, Lancefield, Dululu said: “Look at the meat on that bull, the weight, the volume, the capacity. He carries that weight very well.”

“He’s very strong, very sirey, very mobile and very long.”

Mr Avo was exhibited by Clint and Robyn Whitaker, Whitaker stud, Mundubbera, and continued his winning form, having previously being sashed the reserve senior champion bull at Beef 2012, the senior and grand champion Brahman and supreme male at Rockhampton Show, the supreme beast of the show at Nanango Feature Show and the supreme male of the show at Bundaberg.

He is a son of ABBA Sire of the Year Eureka Creek Marksman and the Carinya M The Don cow, Whitaker D199.

Although numbers at the Ekka this year were down, following the strong roll-up at Beef 2012, the 52 head presented from 22 studs were of exceptional quality.

Mr McCamley was assisted in selecting the winners by associate judge Logan Kirk, Hazelton stud, Blackwood, Middlemount. They selected Cambil Tommy Rocket as the reserve champion senior bull, the grey placing second to Mr Avo in the 30-under 42 months class. Tommy Rocket was shown by Lawson and Sophie Camm, Cambil stud, Proserpine and weighed 862kg at 34 months, with an EMA of 130 sq cm. He is by JDH Atlas Manso 328/3 (imp) and out of the Tartrus Rembrandt Manso cow, Cambil Empress 3243.

Mr McCamley said Tommy Rocket was the complete package.

“He’s got lovely pigment, very good bone, good testicles, and he’s a very complete all round bull.”

The junior bull championship was awarded to Raglan Laxargo, an IVF son of BNA Bar Manso 387/7 Lexington (imp) and Hamdenvale Rocky. The March 2011-drop bull weighed 668kg, with an EMA of 122 sq cm, and was exhibited by Andrew and Roxanne Olive, Raglan stud, Raglan. Laxargo followed up on wins as the male calf reserve champion at Beef 2012 and Rockhampton Show.

Mr McCamley said Laxargo was “outstanding”.

“I love the carcase qualities, he’s very long, got lots of natural muscling and stands on good bone, feet and legs.”

John Weise and Tim and Sally North exhibited the 14-16 months class winner

Photos by QUEENSLAND COUNTRY LIFE
and junior bull reserve champion, Jay W Caribbean Manso. The son of JDH Mr Dwayne Manso 837/3 (imp) and PBF Calipso Manso 5/9, weighed 570kg. Raglan and Elrose shared the female broad ribbons, with the female grand championship going to the senior cow Raglan Matilda, paraded with a three-week-old bull calf at foot by PBF Rutherford. Matilda, who is by Brahrock Details and out of Raglan Miss Emily 311 (by Apis Creek Carter), was the winner of the 30-under 48 months class. Mr McCamley said deciding the senior championship between Raglan Matilda and the 24-under 30 months class winner, Elrose Springtime 8575, was one of the hardest judging tasks he had undertaken. “These are two outstanding females and both are extraordinarily good females in their own right. They are very long, very feminine, tremendous females.”

“The grand champion is very feminine, very long, good underneath and anyone would be proud to own her,” Mr McCamley said. Elrose Springtime, who was also the reserve champion senior female at Beef 2012, was heavily in calf to JDH Sir Alamo Manso.

The Jefferis family claimed the junior female championship with their Beef 2012 calf champion Elrose Miss Didor. Both of their heifers are by JDH Modelo Manso (imp) and won the Pair of Females class as well as being part of the winning Progeny Stakes Group.

Raglan collected the junior female reserve championship with their 14-under 16 months class winner Raglan Loretta, a daughter of JDH Prophet Manso (imp) and Raglan Miss Lyla 445, who is by the noted sire WHS Andy Imperator (imp).

Whitaker finished off a winning day by showing the first placed Breeder’s Group and Pair of Bulls.

WILANGI BRAHMANS

Australia’s Premier Grey Brahman Sale Selection!
An unjoined polled red heifer, Garglen Rena, topped the 2012 Gympie Brahman Female sale on June 2, selling for $11,000.

The annual southern Queensland sale, sponsored by the South Qld Branch of the ABBA, sold 71 quality heifers for an average of $2359, attracting a large buying gallery including several New South Wales studs.

The $11,000 top seller, offered by the Bishop family, Garglen, Gympie, will join the Mollenhagen family’s Mountain Springs stud, Mt Perry. Rena is a November 2010 drop daughter of Lanes Creek Red Ranger and is out of the JDH Mr Woodman Manso (imp) cow PBF Aravane Manso 79/7.

The highest priced grey, at $8000, was Clukan Lady Texas 1113, offered by Steve and Therese Taylor, Clukan, Jambin and purchased by Geoff Angel, Glengarry G stud, Kunwarara. The unjoined Lancefield A Kingsbury heifer is out of the FBC D Webke S Manso cow Clukan Genevieve 780. The Angels also paid $5250 for the Kingsbury heifer Clukan T Georgia 2nd, offered by Taylor Partnership, Jambin.

Clukan also collected the third best price of $6750, being for the unjoined full Hudgins heifer Clukan Casablanca 233/2. The daughter of JDH Mr Dwayne Manso 837/3 (imp) and FBC R Casey Manso was snapped up by Bill and Vicki Gabel, Avee stud, Wowan. The Clukan prefix achieved the best sale average of $4875 for four head.

Leon Cunningham, Goldstar stud, Upper Corindi, NSW, paid $5000 for Kamir Miss Highlight Manso, an IVF product of Mr H Maddox Manso 654 (imp) and Kabala Illuminate. The unjoined grey heifer was offered by the Dunn family’s Kamir stud, Thangool, which averaged $3500 for four head. The Dunns received $4000 for Kamir Lady Patricia Manso, one of the first JDH Wellington Manso (imp) progeny to be offered. Patricia Manso, who is out of the stud’s top donor female Shillah Park Lady Sienna Manso 299, was knocked down to Paul and Donna Taylor, TMB stud, Goomeri.

Wal Shepherd, Condor Cattle Co, Christmas Creek, received $4000 for Condor Miss Calibre, a polled daughter of homed sire Condor Calibre Manso 400. She will join Garglen stud.

Clukan T stud averaged $3250 for six females. Their draft included $3750 Clukan T Elysia 2nd, by Lancefield A Kingsbury, and the $3000 Dwayne Manso daughter, Clukan T Maddie Rem 241/2. They sold to Ron and Yvonne Carr, Bidgee View stud, Narramine, NSW and Bruce and Debbie Godden, Ego stud, Gympie, respectively.

Chudley Red Jingle was the top seller from Rob Walker’s Chudley stud, Cooroy. The red Chudley Cajun Steel daughter sold for $3000 to Clive and Debra Dingle, Marchioness stud, Mt Perry.

Ashley and Shayne Gardiner, Banarra Brahmans, Sandy Hollow, NSW, paid $3000 for Brahrick Miss Prophet Cindy 4336, an...

unjoined JDH Prophet Manso (imp) daughter from the Sommerfeld family’s Brahrock stud, Maryborough. The stud’s JDH Sir Kemper Manso (imp) heifer, Brahrock Miss Kemp Empress, who was in calf to Mr V8 189/4, went for $3000 to Wayne Harney, Sid Ney stud, Apple Tree Creek. The prefix’s unjoined JDH H Maddox Manso (imp) heifer, Brahrock Miss Maddox Bella, made the same rate, going to Ced Weis, Besanther Vale, Goomeri.

The major buyer at the sale was Ashley Gardiner who selected 14 heifers at $1875 average. Ian and Debbie Frampton, Little Creek, Widgee, outlaid an average of $1821 for seven new breeders and G. and D. Beddows paid $1458 avg for six head. Five heifers at $2700 avg were snapped up by Ron and Yvonne Carr.

WET conditions turned into a fine result for Alf Collins’ CBV sale, held on-property at Belah Valley, Marlborough, last Tuesday, July 10.

Repeat and new buyers snapped up 250 Brahman bulls, offered with four generations of performance and fertility data behind them.

Repeat buyer Michael Lyons, Wambiana Station, Charters Towers, purchased the sale topper and the second top-priced bull for $7300 and $6000 respectively.

Mr Lyons’ said the two grey polled bulls he selected had everything going for them.

“They displayed a beautiful, quiet temperament, and had above average growth,” Mr Lyons said.

“They have four generations of high fertility behind them, and they will be joined to Brahman cows that have been selected for having a calf every year.”

Vendor Alf Collins said the mothers’ calving intervals of Michael Lyons’ bulls were excellent.

“The top priced bull’s mother has had six calves, and has a calving interval of 363 days. Her days-to-calving EBV is -8.7, which is a wonderful figure,” Mr Collins said.

“The other bull Mr Lyon’s purchased for $6000, his mother has had six calves in a 368 day interval, and is due to calve again in July. That cow has a days-to-calving EBV of -19.7, which is outstanding.

“The data we supply is meaningful in terms of commercial return. It’s dominated by reproduction, speed, and reliability.

“It’s a great benefit to our clients. The data we’ve collected over the past 30 years is really starting to consolidate in our herd,” Mr Collins said.

Some of the volume buyers on the day included Aaco, who selected a draft of 70 bulls.

“Dave Griffiths and Roger Stillwell, Moriah Pastoral, Prairie, took home ten bulls this time. The partnership would run over 50 of our bulls at the moment, which are used in a tight breeding schedule,” Mr Collins said.

“Quite a number went into semi-desert country this year, while others went into some of the nicest country you’ve ever seen. There will be 30 sires heading to the western side of the Northern Territory as well.

“Carl and Judi Bain, Lantana Station, Cheepie, near Quilpie, have had the bulls in their care for the past eight months. The bulls had been running on mulga country, and were offered in a hard, working condition. Our bulls next year will come off the same country,” Mr Collins said.

SELLING GOLD CITY 2012
GREY LOTS 43-52
Proserpine Showground played host to the milestone 100th Whitsunday Show in June, attracting close to 100 head of stud cattle entries.

A further 88 head of commercial cattle were shown and more than 60 students competed in the junior judging and junior parading competitions.

The stud cattle were judged in interbreed classes by David McCamley, Lancefield D stud, Dingo, and associate judge Hayden Deboni.

They selected the locally-bred Brahman Cambil Tommy Rocket as the senior and grand champion all breeds bull. The November 2009-drop son of JDH Atlas Manso (imp) and the Tartrus Rembrandt Manso female Cambil Express was paraded by the Camm family, Cambil stud, Proserpine.

Cambil also collected the reserve senior female championship with their over-30 months class winner Cambil Shakeria 3670. The three-year-old cow is a daughter of El Ja Taco MM Manso and El Ja Sherry Manso.

Scott and Geoff Angel’s Glengarry stud, Kunwarara, was named most successful Brahman exhibitor and most successful all breeds exhibitor, collecting a number of championships and winning the Breeder’s Group and Sire’s Progeny Group classes.

They paraded the junior champion bull Glengarry Moonshine 1974 and the reserve calf champion bull Glengarry McCool, both by their home bred sire Glengarry Sub Zero.

The bull calf championship was awarded to Jay W Caribbean Manso, shown by John Weise and Tim and Sally North. The 9-12 months class winner is by the import JDH Mr Dwayne Manso 837/3 and out of the IVF cow PBF Calipso Manso 5/9.

The Randall family, Crinum, Tieri, presented the 21-24 months female class winner Crinum Miss Chloe Manso, who went on to be sashed the reserve junior champion female. She is a daughter of Wilangi R Xerox.

John Cowen, Joco stud, Sarina, paraded the calf champion female Joco Chancie. She is by PBF Augustin Manso and out of Carrinah Park Lady Anna Manso.

The reserve female calf championship went to the under nine months class winner, Hamdenvale Duchess, a JDH Duke De Manso 695/7 (imp) heifer from David Deguara’s Hamdenvale stud, Mackay.

**Glengarry most successful at 100th Whitsunday Show**

**Success for McCamleys at 2012 CQ Carcase Classic**

Andrew Bodycoat, Pfizer Animal Health presented David and Julie McCamley, Lancefield D, Dingo with the prizes for winning the Reserve Champion grassfed carcase at the 2012 CQ Carcase Classic.

The purebred grey Brahman heifer carcase gained maximum points for marbling, meat colour and texture and also won the grassfed single trade steer of heifer, maximum 2 teeth 180-300kg class.

The McCamley’s pen of 3 Brahman heifers also placed third in the grassfed trade steer or heifer class.
ANNUAL SALE
30TH OCTOBER INVERRIO DUARINGA 11AM – 104 BULLS 18 HEIFERS
New ABBA Life Member Brett Coombe, who operates Roxborough Brahman stud at Moura with wife Lyn, said the honour was unexpected, but much appreciated.

His Life Membership was bestowed by the ABBA Council in recognition of 20 years’ service to the association.

Brett was ABBA president from 1998-2001, vice president from 1995-1998, and has been the treasurer since 2004.

His numerous other roles include 21 years as chairman of the Rockhampton Junior Beef Committee, 19 years on the Technical Committee including 15 years as chairman, 13 years on the Brahman Week Sale Committee, and 15 years on the Register of Renown Committee.

Brett has also served for extended periods on the Judges’ Committee, Brahman Services Board, Beef Promotion Committee, Beef ‘94 and Beef ‘97 Stud Show Committee, MLA National Beef Genetics Advisory Committee and AGBU Consultative Committee.

He said one of the highlights of his involvement with the Brahman breed was the establishment of the specialty Brahman restaurant at Beef 2000, run by John Kilroy whom he describes as the ultimate professional.

"I think it was one of the best things we ever did, as it was at a challenging time when MSA had just kicked off, and it helped people realise that Brahman cattle could meet premium markets," Brett said.

Another memorable event during his time as president was a trip to the World Brahman Congress in South Africa in 1999.

"I sat in Kruger Park when we beat the Springboks in the last minute of the game when John Eales kicked a goal. It was a great moment," he said.

Brett said his long history of service with the ABBA was influenced by team and leadership lessons from playing Rugby Union. Before retiring at 22 with a shoulder injury, he captained his school team, played in the Queensland Agricultural College A-grade side, toured New Zealand with the Queensland Under-19 and Under-21 teams, and played Open matches against Fiji, Scotland and Argentina.

"Rugby teaches you how to be in a team environment, and to work effectively as a captain you’ve got to lead by example," he said.

"It teaches you to rely on your people; you have to have faith in other people’s ability, and you do because you know they can do the job."

He said he hoped the fact that he had completed a Bachelor of Business Degree in Rural Management would inspire younger generations to study before returning to the land.

Brett said he had learnt a lot from many inspirational ABBA councilors over the years, including the late Jeff McCamley and Sam Atkinson, and Carolyn Briggs and Keith Lansdowne.

"Jeff McCamley taught me a lot. He had great humility and would do anything for anyone. He was the consummate salesman and really knew how to look after people."

"Carolyn Briggs made a great contribution and was an inspiration for what she..."
It Just Makes Economic Sense

All of these cattle on this page are sired by LMC LF Ambassador, one of our proven smooth POLLED Senior Herd Sires. We were impressed with him as a calf and the Brahman World has been very impressed with his calves. They sell at a very young age and have averaged $7,143 usd. Why? Because they are good, thick, correct, sound, good looking and POLLED. If we can do this, you can do the same as many of these are out of horned cows. We have never culled a calf sired by Ambassador. Now is a good time to buy semen on this great bull. Why? It Just Makes Economic Sense to AI or ET some of your best cows to Ambassador to add ECONOMIC PROGRESSION to your program!!

ROCKY REPRO
Queenslands Bovine Reproduction Centre
achieved for the ABBA, for Beef Australia and for her own family.”

He said another great role model was Alf Collins, for his commitment to objectively measuring performance to identify and select better genetics.

“Alf is a great example of just believing in something and doing it.”

He also paid homage to the outstanding contribution of ABBA General Manager John Croaker and his staff.

“Their support has made my job and the job of the Council a whole lot easier and it’s been a pleasure to be involved with the team over the past twenty or so years.”

Brett said his father Ken had also been a great mentor and showed, through his leadership of the ABBA in the 1970s and 1980s and the evolution of the triennial beef expos, that hard work could produce remarkable results.

Brett also acknowledged his wife Lyn who supports him and also inspires him because of her high achievement as Chief Instructor with the Pony Club Association of Queensland.

As well as being the father of two girls, aged six and eight, Brett has had a long involvement with children through his 21 years as chairman of the Rockhampton Junior Beef Committee.

“It’s the one thing that has given me more satisfaction than anything else, to see the number of young people coming through. There was nothing like that when I was little and I would have loved the opportunity to attend something like that when I was young,” he said.

Another rewarding achievement has been his 13 year involvement with Meat and Livestock Australia advisory groups.

“Representing northern Australia and getting them to better understand the northern beef industry has been very important and I’ve certainly enjoyed that.”

Over the years with the ABBA Brett said the greatest advancement had been the computerization of the herd book, which had simplified record keeping and made genetic selection and evaluation so much easier.

He said he had always taken his role on the ABBA council very seriously, remaining mindful of the impacts the council’s decisions would have on members.

“I have always been very aware that major decisions we made could affect people both financially and emotionally, and that decisions needed to be fair whether members were running two head or two thousand head.”
HORNED OR POLLED?

WITHOUT A HORN POLL™ TEST, IT'S A LOTTERY

Working out which cattle in your herd will be horned or polled is no longer a game of chance. The new HornPoll DNA test enables you to confidently identify genetically polled cattle* that will not pass horns onto calves. That means you can breed horned animals out of your herd a lot faster. Making cattle handling easier and allowing you to cash in on the premiums paid for polled cattle sooner.

So if you’re looking for a faster and more accurate way to get horned cattle out of your herd, the numbers you’ll need are 0437 226 122 to talk to Terry Farrell, your Pfizer Animal Genetics representative.

“ We would like to thank the Nobbs family for the invitation to sell at their Annual NCC Brahman Sale”
The McCamley Families of Tartrus and Lancefield Brahman Studs are shaping up to their 39th Annual Sale with a catalogue of bulls and females of extraordinary genetic strength, high quality, eye catching breed character and style, and very impressive beef industry credentials. 132 Brahman sires and 26 heifers have been selected for the Sale to be held at Gracemere on Monday 29th October.

The grey section of the Sale carries most weighting with 112 sires and 18 heifers, while 20 sires and 8 heifers support the red section of the Sale.

Brahman breed enthusiasts will note from the catalogue the proliferation of sons and daughters of Tartrus and Lancefield’s own bulls, selected by the McCamleys as the superior sirelines to further advance performance and production in their herds through the next years. Tartrus Lancefield Sale Co-Ordinator Ken McCaffrey of McCaffrey’s Australian livestock Marketing said the McCamleys have over the years utilised many of the better import bloodlines to great effect in their breeding programmes, but now progeny of their top homebred sires are outperforming most of the direct import sires most of the time.

Grey sirelines in the Sale include the Lancefield sires Whistler, Evolution, Elgin, Ecstacy and Enrique, all sons of JDH Mr Echo Manso, the JDH Mr Books Manso sons Barack and Busby, Reno sons Rackateer, Romeo and Rocafella, and the industry proven Buster, Hercules, Mr Adonis and Riddell from Lancefield, while Tartrus sires Encore, Reiner and Mr Andrew Manso (a son of JDH Mr Abel Manso) and Elrose McMahon all have progeny in the Sale. Poll sires Lancefield Doncaster, Kirby, Kingston and Colissimo, and import JME Mr Esto 28 in the greys, and KP Monty and Lancefield Roberto in the reds, all have poll sons in the catalogue.

Those bull buyers looking for the quality import sire in the first line of the pedigree will have a selection of lots by the JDH bulls, Sir Paul Manso and Sir Watts Manso, both representing the highly successful Lawford sireline, and also by JDH Mr Manso 93/3 (a son of the great Charley’s Jazz) and JDH Sir Reno Manso. Strong character sire Mr 3X HK Potente features as the sire of a number of Tartrus red Sale bulls.

The Vendor Studs have really strengthened the heifer offering of this year’s Sale in numbers and quality. “We appreciate that many Brahman breeders wanting to invest in quality females travel a long way to attend the Tartrus Lancefield Sale,” Jennifer McCamley said, “so this year we have committed to cataloguing a sizable selection of lovely, well bred heifers to give Studmasters a better choice to secure quality females from our best bloodlines.”

Kenrol Valentine wins hearts in Rockhampton

Kenrol Lady Valentine 0380 won plenty of hearts at the 2012 Rockhampton Show in June, where she was sashed the senior and grand champion female and champion of the breed.

The red IVF daughter of DB Valentino 48/3 (imp) and the VL Rojo Grande 26/8 (imp) cow, Crystal Vale Titanic, was paraded by Ken and Wendy Cole, Kenroilstud, Gracemere.

She won the 30 months and over class before graduating through the ranks to be the ultimate champion on the day. Kenrol also paraded the female calf reserve champion, Kenrol Jilly 0450, a polled red daughter of Kenrol Mr HJ Ray 0366 and NCC Jill 1389.

The Rockhampton Show lineup was judged by Braford breeder Graham Galloway, Ascot, Banana.

Kenrol Valentine wins hearts in Rockhampton

The class runner up to Lady Valentine, Whitaker Miss Ruby Red, was awarded the senior female reserve championship. The August 2007-drop daughter of two-times Dam of the Year, Whitaker Maggie, is by SRS Mr Profiler 729 (imp). Ruby Red carried on her winning form from the previous year for owners Clint and Robyn Whitaker, Whitaker stud, Mundubbera.

In the senior bull classes, the championship went to the 30-36 months class winner Whitaker Mr Avo, a successful son of Eureka Creek Marksman. The stud prefix also claimed the junior bull reserve championship with Whitaker Yogi and the junior female championship with the Eureka Creek Marksman daughter Whitaker Miss Sweet Pea. Yogi is by Garwin 1199 and out of the home-bred Carinya M First Impression daughter, Whitaker D122.

Scott and Geoff Angel’s Glengarry stud at Kunwarara had a winning run with progeny of Glengarry Sub Zero, being awarded the male and female calf championships and the junior bull championship. Their junior champion bull, Glengarry Moonshine, is...

out of Glengarry Belle 1423, while their calf champions Glengarry McCool and Glengarry Fantasy 2020 were both out of home-bred cows by FBC W Jordan De Manso.

Raglan Leonardo, a January 2010-drop son of WHS Andy Imperator and Spring Valley 64 Ms Tegan, claimed the senior bull reserve championship for Andrew and Roxanne Olive, Raglan stud, Raglan. The Olives also paraded the male calf reserve champion, Raglan Laxargo, who is an IVF product of BNA Bar Manso 387/7 Lexington (imp) and Hamdenvale Rocky 485/9.

The junior female reserve championship went to the 15-17 months class winner Solo F Lady Tilly. The JDH Sir Alamo Manso (imp) heifer was bred by Matthew and Fiona Noakes, Solo F stud, Marlborough and paraded by students from The Cathedral College, Rockhampton.

The group classes were evenly spread, with Glengarry Sub Zero progeny winning the Sire’s Progeny Group, Whitaker Maggie progeny winning the Dam’s Progeny Group and Raglan showing the blue ribbon winning Group of Four Head.

Two days of persistent rain failed to dampen the enthusiasm of the 115 competitors at the ABBA-sponsored Rockhampton Junior Beef Show on June 26-26.

The annual Rockhampton Showground event saw aspiring young beef producers from Queensland, New South Wales and Western Australia compete in age group classes for prime cattle judging, stud cattle judging, junior parading and led steer judging.

The three-day program also included educational sessions such as basic cattle handling and shed manners, steer selection and artificial insemination.

One popular new event was the Cook-Off Challenge where Kelly Payne, Matt Dorney and Jake Phillips from Meat Standards Australia (MSA) demonstrated how to break up a rump into sub primal cuts. The junior competitors then had to cook the beef and accompanying vegetables and plate them up to look appetising. A Master Chef-inspired atmosphere was created by having tiered ringside seating overlooking the barbeques on the Cattle Club verandah.

MSA’s Jake Phillips oversaw the prime cattle judging which took a different format this year. Because the rain prevented cattle from being yarded at Gracemere CQLX, contestants judged the led steers at the showground. Winners (from youngest to oldest) of the prime cattle judging were Lockie MacTaggart, Riley Connor, Lucie-Ann Kirk, Amy Birch, Madison May-Thomas and Chloe Gould.

Shane Bishop, Garglen, Gympie adjudicated the junior judging and the stud cattle, and the junior paraders were judged by Angus Creedon, AJC Brahman stud, Leajohn Park, Middlemount.

The 18-25 age group championship was awarded to Chloe Gould, Mundubbera, who received the $1000 Landmark Scholarship which enables her to compete in the junior judging and junior paraders events at the 2012 Brisbane Royal Show. Chloe made a clean sweep, winning each of her classes.

The 16-18 years championship was secured by Madison May-Thomas, Monto, who received an AI kit from

Fun in the rain at Rocky Junior Beef Show

Beef Breeding Services. He won both the stud and prime cattle judging classes for his age group and placed fourth in the junior parading.

Abe Graham, Alton Downs, took home a $250 voucher from Georges Workwear and Country Outfitters after being named the 14-16 years champion. Abe accrued championship points by placing second in the prime cattle judging and third in the junior parading.

The Philip Bauman Memorial Award, which came with a $150 gift voucher from Commonwealth Bank Agribusiness, went to Lucie-Ann Kirk, Hazelton stud, Blackdown, Middlemount. Lucie-Ann won the junior judging and placed second in the stud cattle judging and the junior parading.

Brothers Riley and Bow Connor, Alton Downs, collected the under 12 years and pewee group championships respectively. Riley received the Ross Warner Memorial Shield and a $150 voucher sponsored by DLV Finance, while Bow was presented with the Ken and Joan Newton Award and a $150 voucher from Georges Workwear.
For long term protection against internal and external parasites choose Cydectin® Long Acting (LA) Injection for Cattle. Just one small dose of Cydectin LA is enough to prevent the development of viable cattle ticks for at least 51 days and provides long term protection against worms for up to 120 days. That puts it in a world of protection all on its own. Insist on Cydectin Long Acting Injection and really protect your most important assets.

*While every species has not been tested; four major species have. See label for details. Cydectin® is a registered trademark of Virbac (Australia) Pty Limited. Dectomax® is a registered trademark of Pfizer.

Buyers paid a healthy $3096 average for 166 bulls at the annual Ponderosa Bull Sale in Katherine, NT, on May 26.

Sale vendors were Paul and Debbie Herrod, Ponderosa, Katherine, along with Central Queensland Brahman studs Olive, Viva, Raglan and Apis Creek. The sale was well supported by beef producers from throughout the Top End.

The highest priced grey bull at $5000 was one of three head purchased by Chris and Amanda Howe, Maneroo Station, Douglas Daly.

Bluegrass Pastoral Co, Mistake Creek, invested in 20 new sires including the highest priced red at $4250.

The major buyer at the sale was Thames Pastoral Co, which secured 30 bulls for Tanumbirini Station, Daly Waters. Thames Pastoral Company is an Australian subsidiary of London-based Insight Global Farmland Fund Ltd and purchased the 500,100 hectare property from Sterling Buntine in February this year.

Russell Richter from Heytesbury Beef purchased 20 head, with 16 greys knocked down to the VRD region’s Milton and Christina Jones, Coolibah Station.

Mike and Jane Shaw took home a dozen new sires for their Spring Creek Station located in the East Kimberleys, while 11 head each sold to Bill and Kerry Darcy, Battlin Pastoral Station, Borroloola, and Tony Searle, Paspaley Pearls.

John and Kate McLoughlin invested in 10 grey bulls for Aroona Station, Katherine, and eight head sold to Robert and Fran Venturin, West Elye Station, Mataranka.

Taking home seven bulls each were John and Lisa Dyer, Hayfield Station, Daly Waters, and Raymond and Pam Murphy, Kalala Station, south of Katherine.

Tony Moran was another bulk buyer, selecting five bulls for Victoria River Research Station, Kidman Springs.

Big sale celebrations planned for Wilangi 25th

The 25th Anniversary of the Wilangi Invitation Sale, which will be celebrated at Dalrymple Saleyards, Charters Towers on Thursday 29th & Friday 30th November, has encompassed an exciting programme of stud bull and commercial Brahman female auctions, a Beef Industry Forum presentation and an Anniversary Dinner, making it one of the most significant beef cattle industry events in northern Australia for 25 years.

Ron & Bev White of Wilangi Brahman Stud have seen a lot of changes in the Brahman industry since they made the bold step to establish their sale at Charters Towers in 1988. The sale is Australia’s premier sale of grey Brahmans, and again in 2011 it was the leading private vendor sale for the Brahman breed in the nation. The Wilangi Sale’s success at Charters Towers was the catalyst for a period of enormous growth of the Brahman breed in the north. Many new studs were established after Wilangi what the appetite of cattle producers across the northern cattle country, for high quality Brahman.

Wilangi was first to endorse and promote Charters Towers as a stud cattle selling centre of importance, and their early backing of the Dalrymple Saleyards when facilities were very basic, provided impetus for the local council to drive saleyard improvements throughout the last two decades. It is now recognised as one of the leading saleyards for stud cattle sales in Australia.

This year the Wilangi Invitation Brahman Sale will sell its 7,000th lot, a tremendous achievement for a private vendor stud cattle sale in Australia, and a positive measure of the success of the sale’s bloodlines in the beef industry over such a long period. “Many, many sales have come and gone but the Wilangi sale made their mark right from sale one,” said McAffrey’s Australian Livestock Marketing auctioneer Ken McAffrey.

This year’s sale event has put in place a two day programme of attraction not only to Brahman breeders but also to all participants in the Northern beef industry.

On Thursday 29th November all sale lots will be penned for the inspection of prospective purchasers from 11am. “It is a large number of 300 lots and this time gives cattle producers a valuable opportunity to assess the bulls they are interested in before the pressure of sale morning,” Ron White said.

A two hour Beef Industry Forum with speakers on subjects such as the EU Market potential for northern producers, graziers’ land rights, and Brahman cattle benefits in feedlotting will take place on Thursday afternoon at the Dalrymple Saleyards, and is certain to be very informative in addressing current key issues for beef producers.

Following the forum on Thursday afternoon, a new innovation for the Wilangi Sale will be a quality sale of around 300 select purebred, grey Brahman commercial females in attractive pen lines of half-deck lots. “These sale vendors don’t generally sell many breeder heifers however, especially for this 25th Anniversary, they have selected a magnificent run of high quality breeder prospects, more than likely the best that has ever been yarded at Charters Towers,” said auctioneer Ken McAffrey.

Ron & Bev White of Wilangi Brahman Stud look over the Sale catalogues of their previous Wilangi Brahman Sales dating back to 1988 as they prepare for their 25th Anniversary Sale event at Charters Towers

Over 600 delegates attended the 16th World Brahman Congress in Panama from July 2 – 7 2012.

A total of 27 countries, were represented including the leaders of all the major Brahman registers in the world and this event was another good occasion for our delegation to promote the profile of the Breed in Australia and the opportunity this presents for improved herd development in other countries.

The conference programme included a stud cattle show which included over 300 entries, visits to some of the leading Brahman studs in Panama and a visit to the University of Panama Ag Science Department and a technical conference.

The Australian official delegation of 15 led by Andrew Olive included Roxanne and Aimee Olive, David and Joy Deguara, Dr George Jacobs, Glen Pfeffer, Denise and Tom Delahunty, Graham and Delma Hampson, Terry Hampson and Jeannie Wright, Ashley Kirk and Matthew Noller. They were encouraged by the reception they received and the opportunity to build relationships with the leaders in the Brahman industry throughout the world and particularly the Latin American countries where there appears to be strongest interest for Australian breeders.

The delegation members took every opportunity to connect with breeders from countries such as Honduras, Costa Rico, Guatemala, as well as Brazil, Colombia, Paraguay, Mexico and the USA to profile the breed in Australia. We will make every effort to maintain connections with leads generated from these discussions and keep members posted on developments.

It was beneficial to receive feedback from other delegates that Australia is recognised internationally for running large numbers of Brahman cattle and meeting premium markets, which is a strong selling point.

In particular our delegation had the opportunity to follow up with members of the delegation from the Philippines on discussions on sourcing from Australia which commenced during Beef 2012 in Rockhampton.

In follow up a proposal has been put to the Philippines Government through the President of the Federation of Cattle Raisers Assoc of the Philippines, Mr Billy Badillia for the importation of 1000 registered females, 50 bulls and 500 commercial females. It is believed the proposal has received favourable consideration from the Secretary for Agriculture.

Although not yet finalised, reference to a possible importation was made in a statement printed in the Philippines Star newspaper on 16 July 2012.

A meeting of the World Brahman Federation was held during the Congress which among other things held a discussion on progressing the concept of a World Brahman genetic evaluation.

This meeting was attended by the Associations President Andrew Olive and a number of other delegates. As further information on the progression of this matter becomes available, we will circulate details to members.

A presentation of a hand crafted Australian stockwhip was made to the owners of the Grand Champion Bull and Female at the show which was a positive gesture to further enhance public relations with our international counterparts.

The congress also provided a good opportunity to promote the Australian World Congress scheduled for 2016 to a Latin American audience many of whom expressed interest in attending.

This was an important opportunity to take as the next congress in 2014 will be held in South Africa.

Overall the congress in Panama was another successful opportunity to profile Australian breeders to the industry globally and on behalf of ABBA I would like to thank all members of our delegation for representing the future interests of our organisation in a very professional manner.

Predictable, fertile, grass-raised genetics proved popular at the second annual ALC Brahman bull sale. Roger Jefferies, Elrose Station, Cloncurry secured the top price bull, a 23 month old polled Brahman, for $10,000 via phone after a determined battle with Australian Agricultural company buyer, Greg Gibbons, Aronui, Dalby.

Vendors, Alf, Louise and Wendy Collins, Gundaroo, Nebo welcomed buyers to their on property sale which saw 63 out of 71 head sold for the average price of $3500. "We're extremely happy with the sale results today. It's gratifying to see our buyers recognise the value of the bull data we provide and use it to select their bulls," said Alf. The stud proudly focuses on economically important traits including fertility, muscling and temperament when selecting sale bulls.

The Australian Agricultural Company paid the average price of $3110 for 30 bulls. Destined for the Victoria River group of properties, Delamere, Montijinni and Camfield, the bulls will join a herd of over 600,000 head designed to maximise profit for the company. The Lynch family, Tara Station, Cloncurry with the guidance of DPI extension officer, Alan Laing selected 11 bulls to average $3600. The family run a 3500 strong breeding herd on their 35,000 acre property, north of Cloncurry. "We’re selecting genetics based on fertility with a definite focus on EBV data and in particular the scrotal size of the sale bulls," said family spokesman, Lachlan Lynch.

Russell Lethbridge, Werrington, Einasleigh purchased 10 bulls for the average price of $3650. Bill and Diane Alford, Rainsby, Aramac secured 2 bulls for the average purchase price of $4400. Rob Young, Belmont Research Station, Rockhampton paid the average of $3625 for 2 bulls.

2013 will see the first of the ALC branded animals on offer after the relatively recent distribution of a family partnership. "Looking at the sale results, we’re delighted to see our buyers agree with our genetic selection and we look forward to working our clients into the future," said Alf. 13 buyers purchased 63 head at the sale.

Pre-Sale online video viewing of the NCC Brahman Sale lots will be available to all prospective purchasers this year.

Brett Nobbs of NCC Brahman has adopted the initiative to allow Brahman breeders everywhere to have a more detailed examination of the sale’s bulls and heifers prior to sale day. The full sale catalogue and video of each lot will be accessed on the new NCC Sale website www.nccbrahmans.com.au. “The video provides Studmasters and commercial cattle producers with a far better dimension than a still photograph,” Brett Nobbs said, “and will assist buyers greatly in making their sale selections.” “It is also of a more substantial assistance if you live in remote areas, can’t make it to the sale and wish to bid by phone,” he added. Importantly, each lot will be videoed in the same place and for the same time so that comparisons can be relevant to the lot.

“It is a very professional presentation done to expose our quality 2012 sale draft to cattle producers across the nation,” Brett said, “it will be interesting to get feedback from other breeders as this is the first time a Brahman Sale has introduced this feature.”

The NCC sale this year has had a change of date and will be staged on Tuesday 30th October, the day after the Tartrus Lancefield Sale, at the Inverrio property, west of Rockhampton. One hundred and twenty two lots are catalogued with the NCC stud accounting for 74 sires and 12 heifers while Invited Vendor the Fenech family of FBC stud will supply 30 sires and 6 heifers to the catalogue.

Sale pedigrees are very strong with high profile Lawford son JDH Mr Elmo Manso listed as the sire of 41 bulls, greys and reds, in the catalogue as well as 6 heifers. JDH sires Sir Marri, Sir Watts, Modelo, Mr Echo and Lincoln as well as FBC Charles Manso, FBC Mr Arnie Manso, FBC Eton Manso, Brahrock Settler and Brahrock Avenue all have progeny in the grey section of the sale while NCC Springbok, NCC Jackson and Wandilla Zula add to sirelines in the red section.

“Our video footage will be online by the end of September so that it gives all Brahman breeders the opportunity to view our sale team from the comfort of their own office at home,” Brett Nobbs said.

Paddock Sale Enquiries Welcome Red & Grey Bulls
An important re-organisation of some sale dates in October has produced a format which will assist buyers of Brahman seedstock in their 2012 travel plans to attend sales.

The Annual On-Property NCC Brahman Sale at Inverrio, Duaringa will be held this year on Tuesday 30th October. It is positioned a day after the Tartrus Lancefield Brahman Sale at Gracemere, Rockhampton which has maintained its traditional date of Monday 29th October.

Previous years’ October sales the Brahman Classic Sale at Gracemere and the PB Fenech Brahman Sale at Sarina will not be held in October in 2012.

The two day, two sale format in Central Queensland, encompassing the Tartrus Lancefield and NCC sales, now brings together outstanding offerings of a total of 280 lots for buyers’ assessment and competition over a 48 hour period. “There is no time of the year when cattle producers and studmasters are not very busy these days and travel is costly, so this October 29th & 30th scheduling of these two premier sales has great benefits for all bull buyers, particularly now that there are two less Brahman sales in this spring season,” Ken McCaffrey of McCaffrey’s Australian Livestock Marketing said.

It is expected that 181 high quality grey sires, 55 attractive red sires and 44 select stud heifers will go under the auctioneer’s hammer over the two day period.

“I have inspected every lot in these two sales and the overall quality and industry appeal is exceptional,” Ken McCaffrey said. “I expect all Brahman enthusiasts will appreciate the opportunities the new line up of these two sales will present.”

---

**Getting to know your Tropical Beef Technology Services Staff**

**PAUL WILLIAMS**

Paul was born and raised on a dairy/beef property in the upper Brisbane River District in South East Qld. After finishing his studies at Queensland Agricultural College, Paul worked on the family property for 4 years. Following this, Paul worked for CSIRO as a Technical Officer for 22 years. Originally Paul was based in Brisbane where he worked on a variety of areas including IVF in cattle, transgenics and on Arbovirus vectors. Between 1996 and 2011, he was based in Rockhampton and worked on a project within the Beef CRC. His main responsibilities involved running and assisting in all aspects of research projects focused on beef production in Northern Australia. This included performing ultrasound scanning on beef cattle for carcase and fertility traits and undertaking artificial breeding programs. He was firstly involved on the Northern Crossbreeding Project at ‘Duckponds’ looking at meat quality in CRC I. His work continued to CRC II and III where he specialised in ovarian and carcase scanning, studying genetic links between meat quality, adaptation and heifer puberty. In CRC III, he continued scanning the cows over six matings to study lifetime reproductive performance.

Mobile: 0427 018 982  Email: paul@tbts.une.edu.au

**JOHN BERTRAM**

John will need little introduction to most. For over 20 year John has worked in a senior beef extension role with government agricultural departments in the Northern Territory and Queensland. He has had a particular focus on beef cattle fertility, selection and genetics, regularly distilling complex research findings into practical management practices. On the research front, John was heavily involved in the Bullpower project which studied the many facets of bull fertility. He was also involved in related research being undertaken by the Beef CRC into bull traits (e.g. sperm morphology) as an indicator of daughter fertility. John also breeds performance focussed tropical composite cattle on his properties in the Brisbane Valley and in the Goondiwindi region.

Profit Based Selection using Brahman Selection Indexes

by Paul WILLIAMS
TBTS TECHNICAL OFFICER

The bull sale season is just about upon us and it is important to understand and appreciate the genetic selection information that will be provided on many Brahman Bulls this season. A very powerful selection tool for commercial and seedstock producers alike are the Brahman Selection Indexes.

A Selection Index is effectively a single unit value predicting a breeding animal’s profitability for a defined commercial production system and market end-point. They are based on weightings on specific EBV traits deemed important for that production system. Ranking animals on their Selection Index value sorts them based on their progeny’s expected profitability for the targeted production system.

As a guide to using Selection Indexes, it is recommended that producers, both seedstock and commercial, undertake the following steps:

(i) Identify the Selection Index of most relevance
(ii) Rank animals on the Selection Index
(iii) Consider the individual EBVs of importance
(iv) Consider other traits of importance that may not be accounted for in the Selection Index (e.g. temperament, structural soundness)

1. IDENTIFY THE SELECTION INDEX

As mentioned above, a Selection Index value for an animal is effectively a single unit value predicting an animal’s profitability for a defined commercial production system and market end-point. Consequently, before using Selection Indexes, producers should identify the index that is of most relevance to their particular production system. For seedstock producers, this may be the production system of their bull buying clients. In order to identify the most relevant Selection Index for use, it is recommended that producers consider the description of each Selection Index available. Following are the descriptions for the 2 Brahman Selection Indexes:

Jap Ox Index - The Jap Ox Index estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture finished steers for export markets. Steers are assumed to be pasture grown & finished, weighing 600 kg live weight or 325 kg carcase weight at 32 months from a self-replacing herd run in a tropical environment. Daughters are retained in the industry for breeding. This Jap Ox Index relates to typical self-replacing Brahman herds in tropical Australia targeting Jap Ox specifications.

Live Export Index - The Live Export Index estimates genetic differences between animals in net profitability per cow joined for an example self replacing commercial herd (run in a tropical environment) targeting steers for the live export markets. This index assumes steers are pasture grown until entry to overseas feedlots and then feedlot finished for 120 days before being marketed at 470 kg liveweight (250 kg HSCW and 10 mm P8 fat depth) at 26 months of age. Daughters are retained for breeding.

Selection Indexes are developed for the commercial sector, as indicated by the descriptions above, therefore it should be relatively simple for a commercial producer to select one of the available Selection Indexes to use in their selection decisions. This is a slightly more complex task for seedstock producers as they are generally providing bulls to a range of commercial producers who are in a range of production systems and supplying a range of market end points. In this situation we recommend that Brahman seedstock producers use the Selection Index that suits the majority of their commercial clients and recognize that the Brahman Selection Indexes are highly correlated, therefore selecting on one (e.g. Jap Ox) will also generally lead to a positive trend for the others (e.g. Live Export).

2. RANK ANIMALS ON SELECTION INDEX

Once the Selection Index of most relevance has been identified, the animals available for selection can then be ranked on that particular Selection Index. An example of this is in figure 1, where the “Published Sires” list has been ranked in descending order on the Brahman Live Export Index using the Brahman online EBV Enquiry facility.

When ranking animals on the Selection Index, producers should also take into account the following points:

• Selection Indexes can not be used to compare animals across breeds. As with EBVs, the Selection Indexes for animals of different breeds are calculated within different BREEDPLAN evaluations.

![Figure 1. Brahman Published sire list ranked in descending order on the Brahman Live Export Index](image)

Profit Based Selection using Brahman Selection Indexes

�74

• Consequently, Selection Indexes can only be used to compare animals with other animals of the same breed.

• Producers can use Selection Indexes to see where an animal ranks compared to other animals of the same breed by comparing its Selection Index value to the current breed average value and to the percentile table.

Comparing an animal with the current breed average Selection Index will give you an indication of how the animal compares with the current genetic level for the breed in terms of profitability for that particular production system and market scenario. The current breed average values are located on the last row in figure 1. If we consider the Live Export Index value of Lanes Creek Red Ranger (AI) (P) of +557 and compare it to the breed average value, it indicates that this animal is expected to have genetics that are more profitable than the current genetic level of the breed if the animal is used within this production scenario.

Comparison of an animal’s Selection Index value to the breed average can be taken a step further by looking at the Percentile Bands table to determine exactly where the animal ranks within the breeds. If we consider the animal in the above example with the Live Export Index value of +557, the Percentile Table below indicates that the animal is in fact ranked in the top 1% of the breed for that particular production scenario and market endpoint (see circled information in figure 2).

As with the breed average EBVs and Indexes, a Percentile Table should be enclosed in all BREEDPLAN reports, sale catalogues etc. They are also accessible from the BREEDPLAN website (http://breedplan.une.edu.au).

3. CONSIDER INDIVIDUAL EBVS OF IMPORTANCE

While Selection Indexes combine all the available EBV information to provide an indication of an animal’s overall genetic merit, it may still be important to pay attention to the animal’s individual EBVs for traits of particular importance. For example, producers may pay attention to:

• Scrotal Size and Days To Calving EBVs if they want to specifically improve fertility in their herd

• Birth Weight if they are planning to use the bull over heifers

• Fat EBVs if they require more or less fat on their steers at slaughter

In order to consider the animal’s individual EBVs, it is recommended that producers set maximum/minimum EBV ranges for the individual traits of particular importance. Animals should firstly be ranked on the Selection Index of relevance but then any animals whose individual EBVs fall outside of the acceptable range be excluded from selection.

4. CONSIDER OTHER TRAITS OF IMPORTANCE

While Selection Indexes take into account all the available performance information on an animal, they do not consider all the traits of functional and economic importance. Consequently, Selection Indexes should be used in association with assessment for other traits of importance that may not be accounted for in the Index (e.g. structural soundness, temperament) and Bull Breeding Soundness Evaluation information.

You can access further information on the Brahman Selection Indexes from the Brahman TBTS Technical Officer, Paul Williams, ph: 07 4927 6066, Mobile: 0427 018 982 or email: paul@tbts.une.edu.au or on the BREEDPLAN website (http://breedplan.une.edu.au) within the “” link.

SALE MONDAY OCTOBER 29

LANCEFIELD D @ PALMALMAL

David & Julie McCamley, Palmalmal, Dingo
07 4987 3068 • email – lancefieldd@bigpond.com
The McCamley Families of Tartrus and Lancefield Brahman studs are shaping up to their 39th Annual Sale with a catalogue of bulls and females of extraordinary genetic strength, high quality, eye catching breed character and style, and very impressive beef industry credentials. 132 Brahman sires and 26 heifers have been selected for the sale to be held at Gracemere on Monday 29th October.

The grey section of the sale carries most weighting with 112 sires and 18 heifers, while 20 sires and 8 heifers support the red section of the sale.

Brahman breed enthusiasts will note from the catalogue the proliferation of sons and daughters of Tartrus and Lancefield’s own bulls, selected by the McCamleys as the superior sirelines to further advance performance and production in their herds through the next years. Tartrus Lancefield Sale Co-Ordinator Ken McCaffrey of McCaffrey’s Australian livestock Marketing said the McCamleys have over the years utilised many of the better import bloodlines to great effect in their breeding programmes, but now progeny of their top homebred sires are outperforming most of the direct import sires most of the time.

Grey sirelines in the sale include the Lancefield sires Whistler, Evolution, Elgin, Ecstasy and Enrique, all sons of JDH Mr Echo Manso, the JDH Mr Books Manso sons Barack and Busby, Reno sons Rackatee, Romeo and Rocafielda, and the industry proven Buster, Hercules, Mr Adonis and Riddell from Lancefield, while Tartrus sires Encore, Reiner and Mr Andrew Manso (a son of JDH Mr Abel Manso) and Elrose McMahon all have progeny in the sale. Polled sires Lancefield Doncaster, Kirby, Kingston and Colissimo, and import JME Mr Esto 28 in the greys, and KP Monty and Lancefield Roberto in the reds, all have polled sons in the catalogue.

Those bull buyers looking for the quality import sire in the first line of the pedigree will have a selection of lots by the JDH bulls, Sir Paul Manso and Sir Watts Manso, both representing the highly successful Lawford sireline, and also by JDH Mr Manso 93/3 (a son of the great Charley’s Jazz) and JDH Sir Reno Manso. Strong character sire Mr 3X HK Potente features as the sire of a number of Tartrus red sale bulls.

The vendor studs have really strengthened the heifer offering of this year’s sale in numbers and quality. “We appreciate that many Brahman breeders wanting to invest in quality females travel a long way to attend the Tartrus Lancefield Sale,” Jennifer McCamley said, “so this year we have committed to cataloguing a sizable selection of lovely, well bred heifers to give studmasters a better choice to secure quality females from our best bloodlines.”
20 YEARS OF SALES

ON MONDAY 4TH & TUESDAY 5TH FEBRUARY, 2013
The Big Country Brahman Sale will stage its
20th Anniversary Auction at Charters Towers.

We are proud of the success that our Sale has brought vendors, and the positive
influence that the bulls, females and semen we have marketed at this Sale have
provided to Australia’s Brahman and beef industry over this period.

Our 20th Sale is a very special year for us, our highly valued
Vendor Studs and our wonderful congregation of loyal Buyers.

BRAHMAN BREEDERS ARE ADVISED
✓ Vendor enquiries now being taken

Big Country – For 20 Years A Progressive Partner Of Australia’s Beef Industry!
Clancy Naughton  
PO Box 1139  
Ingham 4850 Q

Mr John Croaker  
General Manager  
PO Box 796  
Rockhampton 4700 Q

August 20 2012

Dear Mr Croaker

I am writing to thank you for allowing me the opportunity to attend this year’s Rockhampton Junior Beef Week on the June/July school holidays.

Being able to fly down there from Ingham in North Queensland was great and although I was nervous, I couldn’t wait to get there. Thank you very much for funding my airfares and the cost of the event – it was greatly appreciated. Mrs Elliston from your A.B.B.A. office organized everything for me, which was great because Mum is a ‘stresser’!

Everyone made me feel so welcome from the first day right up until I boarded the plane for home. It was a wonderful learning opportunity for me and although my sister, Shelby, and I had attended R.J.B.W. many years ago, I feel I was able to take more in this time, being a little older. I particularly enjoyed the cattle judging tutorials, the parading, and of course the challenge of cutting up and cooking the rump for dinner.

I put these skills into practice at home by winning the Junior Parader competition and placing second in the Junior Judging at the Ingham Show and by advising Mum in the kitchen. I might have to refine how I go about the second one in the future. (Women can be funny like that!) Unfortunately, due to illness, I was unable to compete in the Zone finals in Cairns.

I am eager to continue my association with the cattle industry and believe my future lies within it. I would recommend my experience to other youth in the North and encourage them to participate in the Junior Beef Week in the future. I would definitely love to attend next year.

Once again, thank you for your support. It was very much appreciated.

Yours faithfully

Clancy Naughton

Grinding beef price to US could hit 220c/lb

If recent history is anything to go by, Australian lean grinding beef into the US could hit prices as high as US215-220c/lb CIF by Christmas, a respected market analyst suggests.

A combination of factors led by US beef herd decline, the prolonged impact of drought, the sharp rise in feedgrain prices in the US, a declining herd size in Canada and normal seasonal demand cycles are all supporting the prospect of a substantial rise in imported grinding beef prices by end-of-year.

There is increasing trade speculation evident that US lean beef prices have ‘nowhere to go but up’, should moisture conditions improve into the northern hemisphere autumn and heading into early next year, says Len Steiner, from Steiner Consulting.

Also supportive of imported beef prices is the fact that some of the turbulence created by the bankruptcy and plant sales of AFA Foods (a large US grinder supplying burger patties to major restaurant chains) has now dissipated.

“There was plenty of pent-up demand which is now showing up in the market,” Mr Steiner said.

As the chart here shows, prices for imported lean grinding beef have been steadily rising over the last four years, in concert with the reduction in US domestic and imported lean beef availability. The chart also shows a tendency for the market to kick from around October through to year’s end.

The steady increase in price has also come against the headwind of less competitive Australian currency versus the US$.

“While we could see some softening in prices after the Labor Day holiday (first week of September), the expectation is for imported beef values to drift higher through the end of the year,” Mr Steiner said in his weekly report last week.

In 2009, the price of imported 90CL boneless beef rose from an early October low of US$1.34c/lb to $1.42c by the end of December, a 6pc premium. The following year, prices during this period rose 17pc, and last year, by 13pc.

“If prices this year follow the same trend as a year ago, and that is a big if, we could see imported lean beef values pull back by a US10-25c by the end of September and early October but then rally to US$2.15 -2.20c by the end of the year,” Mr Steiner said.

He stressed that this assumption was simply looking at the trends of recent years, with no regard of supply conditions, exchange rates, and the price of domestic US lean beef.

Reproduction Failure in Males

Reproduction efficiency of bulls is a key driver of herd productivity and the economic viability of the beef enterprise.

It is unfortunate that some stud bulls are sold to the meatworks because of reproductive failure.

“Sub fertile bulls are as big a problem as infertile bulls”

Hopefully, problem bulls are identified early to avoid lost production through reduced numbers of replacement stock, female wastage and low calving and weaning rates.

Reproduction dysfunction involves inadequate structural and functional development, injuries and diseases that compromise the maintenance and activity of the sexual organs. Other contributing factors include poor herd and feed management and various structural faults that impair sexual behaviour.

“Fertility assurances by seedstock providers need to be fair dinkum”

This article presents the key factors that lead to bull reproductive failure and support the information provided in recently published reproduction articles in ABBA Journals.

SPERMATOGENESIS

With correctly structured scrotums and testes clastic conditions have limited effect on semen quality and characteristics. However any condition and structural abnormality that reduces thermal cooling of the testes markedly reduces the quantity and quality of semen (eg overfed bulls and thermal stress).

“Defective structures contribute to fertilisation losses”

Testicular abnormalities that affect spermatogenesis (formation and maturation of sperm) include cryptorchidism and hypoplasia. Factors that lead to the degeneration of the testes also reduce the quality of semen.

CRYPTORCHIDISM

Failure of the testes to descend into the scrotum may be unilateral or bilateral but more frequently is the former. The cause for failure of the testes to descend is not fully understood. Bulls with the unilateral condition can reproduce but should not be retained for breeding purposes. Bulls with the bilateral condition produce testosterone but are generally sterile.

HYPOPLASIA

Underdeveloped testes are small but generally have normal consistency. Testicular hypoplasia (underdevelopment) results in reduced sperm production and less capacity to service suitable numbers of females. Due to the genetic nature of the condition and unsuitable servicing capacity, bulls with underdeveloped testes should not be kept for breeding purposes.

TESTICULAR DEGENERATION

Soft and too firm testes and abnormal changes to the size and consistency of the testes are signs of testicular degeneration.

“Seasonal semen morphological tests are a useful tool to determine degeneration”

Signs of degeneration are usually characterised by sperm ejaculates having an increased abnormal sperm count, poor sperm mobility and abnormal semen morphology.

Degeneration can be caused by temperature elevation (internal and/or external), pathogenic invasions and the presence of tumours. Common signs of testes degeneration include inflammation of the testes (orchitis) and/or the epididymus (epididymitis).

Tumours are more frequently found in bulls over 7 years of age. Bulls with tumours in the testes have a higher proportion of inferior sperm with lower fertilising capacity.

Temperature elevation of the testes due to disease, high fat levels in the scrotum and testes too close to the body cause poor thermal regulation (ie cooling and sweating) which leads to degeneration of the semen. Excessively pendulous scrotums and testicles are prone to damage due to injuries.

AGING

Breeding soundness rises in the post pubertal period then declines with age but there are quite large individual differences due to genetics and herd management factors. Semen characteristics and fertilizing capacity also show a gradual decline with age. As bulls get older mutations can affect the space and function of sperm reducing conception rates. Also, as testosterone levels decline with age, sperm counts start to decline reducing the service capacity of bulls.

MALFUNCTIONS

Inflammation of the epididymis and testes, vas deferens and vesicular glands can lead to lowered semen quality and reduced fertility. Infection and/or physical injury often accounts for the inflammation of these structures.

Overfeeding and lack of use of bulls can lead to the increased occurrence of abnormal semen indicating that these factors can lead to retrogressive changes in sperm during storage in the epididymus.

Underfeeding and overseer of bulls decreases seminal plasma, fructose, citric acid and probably other compounds essential for high quality seminal fluid.

ABNORMAL SEMEN

Under normal circumstances, the quality of semen is reasonably consistent. However, extreme stress (adverse management, hostile environments, poor transport) can impact on bull fertility.

Sperm is continuously produced and takes 6-8 weeks from the start of production to storage in the epididymis prior to ejaculation. Abnormal semen samples can reflect less than satisfactory conditions (heat, disease, stress) during spermatogenesis (semen production).

Semen evaluation is an indicator of reproduction efficiency. However, crushside semen assessments do not guarantee reproductive soundness of the bull since there are several factors that affect full reproductive failure.

Failure of some young bulls to ejaculate at crushside semen assessments is not evidence that the bull will not perform naturally. Similarly, low quality artificially collected semen from young bulls is not absolute proof that the young bull cannot produce suitable semen. In both instances, the young bulls should receive further assessment at a later date.

“Post mating assessments are a reliable indicator of breeding soundness”

SOMETHING SPECIAL...

Samari Plains Luke 1349 (Poll)

S: Billabong Privateer
Luke is a quality sire, he is a full brother to Samari Plains Walton sold to Mogul for $35,000 out of a top poll cow Samari Plains Lulu. Extremely quiet.

Samari Plains Lance 1307 (Poll)

S: Kariboe Valley Impulse
Exceptional width and depth he is a half brother to Samari Plains Wexford sold to Kariboe Valley stud for $75,000. His dam is Samari Plains Pollyanna. Extremely quiet.

Samari Plains Robbo 1270 (AI) (H)

S: Lancefield D Robinson
He is an upstanding big bull with terrific growth and bone. Dam Samari Plains Rylie Gaye. Extremely quiet.

Samari S Bradley

S: Rockley 957 (P)
Will be offered by Sally & Ben Sweestland. Only rising 2 years he has great bone and width, he is by Rockley 957. Dam Samari Plains Tina. Extremely quiet.

Reproduction - Failure in Males

SPERM ABNORMALITIES
Morphologic (structural) abnormalities are classified as primary if they are assumed to have happened during spermatogenesis and secondary if the malformation has taken place in the male ducts.

“All semen has a percentage of abnormal sperm”

Morphological assessment requires that a semen sample (in a special diluent) is forwarded to accredited morphologists. Abnormalities fall into several categories and some morphological defects are more serious than others (eg separation of the head from the tail is a serious defect in infertile bulls).

Generally, if not more than 15 percent of the semen is abnormal and particularly if no serious abnormalities predominate, fertilising capacity is not seriously compromised.

“Morphological abnormalities cannot be characterised in the field”

Recent studies have examined the nucleus within the sperm head and found that infertile bulls frequently have less DNA (deoxyribose nucleic acid) compared to normal bulls.

Unfortunately whilst DNA determination could be a useful tool in assessing bull fertility problems, difficulties in its measurement limit its field application.

COPULATION FAILURE
Sexual behaviour is dependent upon stimuli transmitted through the neural centres of the lumbar portion of the spinal cord. Copulation failure (inadequate erection and ejaculation) can be caused by anatomical defects of the sexual organs, by pain which prevents mounting or intromission, behavioural disturbances and structural unsoundness (eg straight hind legs).

PENILE AND SHEATH DEFECTS
Certain congenital defects can lead to reduced reproduction performance. Penile tumours and abrasions can limit copulation due to pain.

Small testes are often accompanied by an underdeveloped penis. Additionally, a bulls penis may be bent or spiral shaped which prevents vaginal penetration.

Much has been written about the need to avoid pendulous sheaths, however additional structural problems that should receive similar attention include poorly structured and badly attached sheaths and particularly sheaths that have heavy navel folds.

BEHAVIOURAL DISTURBANCES
Intimiation of males by other males is a phenomenon associated with multisire breeding. In addition to these behavioural problems some bulls have intromission without ejaculation. Failure to ejaculate sometimes happens with bulls even when demonstrating high levels of libido and accompanied by vigorous mounting, thrust and penetration of the vagina. Bulls experiencing pain at mounting and intromission may defer sexual activity for several months.

In hot climates obese bulls in addition to having low quality semen are less likely to show interest and service less females than bulls of a normal weight. Obese bulls are also more prone to leg and foot injuries which reduces sexual activity. Arthritis (often the result of heavy grain feeding) affecting the rear legs and spinal column is a secondary cause for failure to copulate.

FERTILISATION FAILURE
Whilst the greatest proportion of embryonic and foetal losses are attributed to the dam, some fertilisation and embryonic failures are attributed to the bull (eg reproductive diseases). It is also possible that fertilisation losses can occur due to sperm antibodies.

Aged semen within the epididymis is also detrimental to fertilisation. Genetic factors can also be involved, eg lethal genes carried by the sperm are a probable cause of fertilisation failure or embryonic loss.

SUMMARY TABLE – PRINCIPAL ANATOMIC OR PHYSIOLOGICAL DEFECTS THAT IMPAIR REPRODUCTION PERFORMANCE

<table>
<thead>
<tr>
<th>DEFECT</th>
<th>CAUSE(S)</th>
<th>INCIDENCE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cryptorchidism (unilateral or bilateral; failure of testes to descend into scrotum)</td>

"Bred Red to Breed Red"
Brahman Week offers biggest numbers and best value

Cattle producers looking for an elite stud sire or a practical herd improver should head to CQLX Gracemere on October 1, 2 and 3 for the mammoth Rockhampton Brahman Week Sale.

A total of 916 bulls will enter the auction ring at Australia’s biggest and best value Brahman sale, which kicks off at 8am on Monday, October 1, with 299 grey bulls.

Day two sees a further 205 greys on offer, followed by 117 red bulls. The sale concludes on Wednesday with 302 reds.

But don’t wait till Monday to head to the saleyards, as the action starts from 4pm on Sunday with the Rockhampton Brahman Week Charity Auction in support of the Isolated Children’s Parents’ Association Fund, Asthma Foundation and the Jeff McCamley Youth Development Fund.

Sunday afternoon also sees a vendor’s choice promotion and a happy hour and barbecue at the saleyards.

At last year’s sale, eager buyers took home 818 head for an average price of $5483. While 13 bulls went for $22,000 or above, the mega-sale maintained its affordability for commercial buyers, with 52 percent of the offering going for a median price of $4000.

Eddie and Debbie Streeter, vendors of last year’s sale topper, $50,000 Fairy Springs Duracell, will again be selling at Brahman Week, this time offering five polled bulls by home-bred sires.

Generous freight rebates apply to long distance purchasers buying five or more bulls and rebates range from $55 to $110 per head depending on the distance travelled.

Catalogues are available from sale agents Elders and Landmark or online at www.brahman.com.au

BATANDRA CLOCKS UP 34 YEARS OF SELLING AT RBWS

Barry and Bev Hannam have been selling their Batandra bulls at Rockhampton Brahman Week Sale since 1979.

The Milman-based stud will offer 13 coastal-bred bulls in 2012, comprising seven greys and six reds.

The greys sell as Lots 239-245, the pick being Lot 240, Batandra Mr Brandon. He is an IVF son of JDH Brandon Manso (imp) and is from a JDH Karu Manso 800 (imp) dam who goes back to JDH Mangum Manso 146 (imp).

Lot 245 is the Vendor’s Choice bull Batandra Mr Midas, a young sire with an impressive pedigree, style and growth for age. He is the first son of Eureka Creek Midas (by JDH Martin Manso) to be offered by the stud.

Barry Hannam, Batandra Brahmins, Milman is pictured with two bulls from their RBWS team - Lot 607 Batandra Jackson 4141 (P), a son of Pine Crest Victa (P) and Lot 605 Batandra Alister 4173 (A) (P), son of Batandra Duracell (Al) (ET) (P)

Other sires represented in the grey draft are Lancefield D Lawler, and Brahrock Mr Karock who is by Karu Manso and out of a Mr V8 901/4 female. Dam lines include cows by the imports JDH Mangum Manso 146, JDH Mr Manso 855/8, Karu Manso and TWA Grande Bo 104.

Batandra’s red draft sells as Lots 602-607 and includes three polled bulls.

The impressive Vendor’s Choice bull Batandra Jacques is “long, deep bodied, stands on good bone and will stamp his calves with quality,” Barry Hannam said.

Lot 605, 606 and 607 are polled bulls by Batandra Duracell and Pine Crest Victa. Red sires Tartrus Redmount and Wandarri Elton and also represented in the Batandra draft.

Mr Hannam said their red bulls were all out of dams by the polled sires Fairy Springs Red Dollar and Long Acres Paul.

“Our bulls are bred and raised on coastal country to perform in harsh conditions and excel on soft country,” he said.

**FIRST JENSEN SONS FROM BREMER VALE**

Bremer Vale Brahman stud at Mt Walker is offering its first sons of FBC W Jensen De Manso and JDH Gardner Manso (imp) at Brahman Week.

Vendors Michael and Jenelle Peters have catalogued four bulls on day one, selling as Lots 215-218.

Michael Peters said Bremer Vale Gardner Power Manso 237 was their pick of the draft. The outstanding JDH Gardner Manso son was supreme champion tropical breeds bull at Toogoolawah, Gatton and Rosewood shows and won his class at Beef Australia 2012 and the Nanango Brahman Feature Show.

He is one of two bulls from leading donor female Bremer Vale Miss Power Empress 2nd who is by JDH Ebenezer Manso (imp). The other, Lot 216, Bremer Vale Jensen Power Manso, is sired by FBC W Jensen De Manso.

The stud is also offering two IVF bulls by JDH Mr Boswick Manso (imp). They are out of PBF Britney Manso 558/5, who is by JDH Palestimo R Manso (imp), and Gralei Lady Gran Manso, who is a daughter of JDH Mr Gran Manso 143/7 (imp).

Bremer Vale has been selling at Brahman Week for five years, achieving a best price of $35,000 for Bremer Vale Boss Manso, who sold to Yenda stud. As well as having a success on the show circuit, the stud is excited to be offering its first IVF bulls at Brahman Week this year.

**FIRST POLLED BULLS FROM CLUKAN**

Two sons of JME Mr Esto 28 (imp) will be the first polled sons to be offered by Steve and Theresa Taylor’s Clukan stud at Jambin.

The Taylors have catalogued eight bulls for Brahman Week, headed by Clukan Esto Power, who enters the ring as Lot 29.

“He has exceptional EBV’s, in the top five percent, and displays plenty of length, bone and growth for age, as well as having a tidy underline,” Steve Taylor said.

“His polled bull will suit studmasters who want the polled gene but don’t want to sacrifice traits from the horned gene.”

Clukan Esto Power’s dam, Clukan Edwina 073, is the mother of the stud’s top polled sire and has EBVs in the top one percent of the breed. Her progeny include the...

Brahman Week offers biggest numbers and best value

$44,000 Gympie Saleyard record priced female, Clukan Karla 141, who sold in 2007 to Northern Vet Services, NT. She has also produced two JDH Sir Tobe Manso (imp) sons that averaged $15,750 at Brahman Week last year.

The Clukan draft also includes sons of Lancefield A Kingsbury and the JDH imports Madison De Manso, Mr Deeds Manso and Wellington Manso.

The Taylors have been selling at Brahman Week for 24 years, achieving the top sale average on two occasions. Last year they sold 11 bulls under the Clukan prefix for an average of $12,318, while the Taylor Partnership’s Clukan T prefix achieved the best sale average of $16,125 for four head. Their 2011 RBWS lineup included the second top priced grey, Clukan T Trademark, which sold for $37,500 to Yoman stud.

FBC RETURNS TO BRAHMAN WEEK WITH 26 GREYS

After a four year absence from Brahman Week, FBC stud returns with 26 head including three polled bulls.

The all grey draft offered by Tony, Joanne, Will and Tracey and Chris Fenech goes under the hammer as Lot 178 and Lots 386-409.

Tony Fenech said Lot 387 FBC Megatron Manso was one of the most “complete” bulls the stud had bred, and was out of a “powerful” cow.

“He’s a complete bull, he’s got a beautiful head, ample bone and he’s loaded with muscle,” Mr Fenech said.

Megatron is by popular sire JDH Modelo Manso 268/5 (imp) and his dam, FBC D Miss Jewel De Manso, is the mother of $60,000 FBC Harrison, $60,000 FBC Constable and $35,000 FBC Agassi.

As well as an impeccable pedigree, Megatron is a show champion, being awarded the senior and grand bull championship and supreme Brahman championship at Marlborough Feature Show, judged by Matt McCamley.

Jewel is also the dam of Lot 396, FBC Nitro Manso, a full Hudgins sire prospect by the JDH Gardner Manso (imp) son, FBC D Charles De Manso.

The Wowan-based stud is offering its first sons of JDH Beto Manso 399/5, a bull they hand picked from Hudgins Ranch.

“We’re really excited about his progeny, they are very good bulls,” Mr Fenech said.

Sure to attract attention is a half brother to FBC Jacko who sold for a record price of $90,000 at the 2006 Brahman Week Sale. He is Lot 389, FBC Scotty Manso, who is out of FBC D Miss Bonny Jo Manso 392 and by JDH Boettcher Manso.

The Fenechs are also offering one full brother and two half brothers to their exciting young sire FBC Eton, who is doing a good job in the stud.

Other sires represented in the FBC draft include FBC D Mr Arnie Manso, FBC D Jacko De Manso and imports JDH Mr Echo Manso, JDH Madison De Manso and Mr V8 51/6.

**Brahman Week** offers biggest numbers and best value

**GLENGARRY SUB ZERO SONS MAKE RBWS DEBUT**

Scott and Geoff Angel will offer 14 head under their Glengarry and Glengarry G prefixes at Brahman Week.

The lineup from the Kunwarara-based stud includes the first five sons of show champion Glengarry Sub Zero and the first three sons of Lancefield Roland Manso.

“We’re also offering two sons of show champion Glengarry Winchester, whose son Glengarry G Touchdown also had success in the show ring.”

Mr Angel said he believed that Lot 189 Glengarry Brooklyn Manso was the best bull they have ever prepared for Brahman Week. The full Hudgins son of Lancefield Roland Manso is out of a Be Os cow by JDH Elliot Manso (imp SA).

“He has correct structure, great conformation, sire appeal, good temperament and comes from a very good family line of full Hudgins females,” he said.

Their other Vendor’s Choice bull, Lot 190 Glengarry First Rate, has very smooth muscling, good structure and plenty of sire appeal.

The Glengarry draft also features sons of Glengarry Impression, Glengarry McMaster Manso and Kenrol Prudential.

“All dam lines are from our top families that have produced good consistent stock for us.” Mr Angel said.

The Glengarry G bulls enter the ring as Lots 174-177 and the Glengarry bulls from Lots 186-195. All will have BREEDPLAN figures.

The Angels have been selling at Brahman Week for 21 years, their bulls peaking at $47,500.

**POLLED REDS FROM MALABAR**

Two polled red bulls will be offered at Brahman Week from Tim and Alison Krause’s Malabar stud at Marburg, in their third year of selling in Rockhampton.

Lot 573 Malabar Red Prince is an impressive young bull with great growth and beef traits. He is by Tartrus Redmount and goes back to Tartrus King Ferdinand on both sides.

“Shamus was a pink nosed bull that had tested in the top one percent for tenderness. The soft, well-muscled future sire is also in the top five percent for feed efficiency and is poll tested PH,” Tim Krause said.

He said Shamus was a pink nosed bull that had tested in the top one percent for tenderness. The soft, well-muscled future sire is also in the top five percent for feed efficiency and is poll tested PH.

Mr Krause said the stud was continuing to build its breeder herd, focusing on fertility and efficiency.

“We have some great looking weaners on the ground by one of our 2011 sale bulls and we were very pleased with how well our bulls sold last year.”

Tim and Alison Krause, Malabar, Murgon, are offering two red bulls at Brahman week, Malabar Red Prince, by Tartrus Redmount, and Malabar Shamus by Edenglassie Manum. Pictured is Lot 574 Malabar Shamus (AI) (P)

First Sidelong Sons for Sale from Mt Callan

The first sons of $34,000 Kandoona Sidelong will go up for sale as part of the all red draft from Mt Callan stud, Dalby.

Noel, Manny and Scott Sorley are offering 16 bulls including 10 polled bulls and one homozygous poll.

They sell on Wednesday from Lots 653-668 and include Mt Callan Leon, a polled son of Kandoona Sidelong.

Noel Sorley said Leon had the potential to be a great stud sire.

“He displays many top attributes including good bone, thickness, topline and a polly head, as well as a very tidy sheath and wonderful temperament,” Mr Sorley said.

Leon is a maternal half brother to Mt Callan Jed who sold to Palmvale stud in 2010 for $32,500.

“Lot 660, Mt Callan Lincoln, is another very quiet, rich red polled bull showing great potential.”

The main sire represented in the Mt Callan draft is Mt Callan Hotshot, with five polled sons on offer. Other sires include Lancefield D Nixon, NCC Valet, Mt Callan Sideburn, and Kandoona Sidestep who was the top priced bull at RBWS in 2004, at $48,000.

Mr Sorley said Mt Callan 18/05, the dam of Lot 656, Mt Callan Leichardt, was an excellent breeder and had been flushed to Kandoona Sidestep because of her high fertility, good udder and type.

“Leichardt’s grand-dam was sold at 19 years of age after weaning her fifteenth natural calf. His sire, Kandoona Sidestep, produced our top priced bull which sold for $55,000 in 2007.”

Lot 661 Mt Callan Lockwood has been tested to be a homozygous poll and is also sure to attract plenty of attention from red buyers.

Nine Polled Bulls in 16-Head Draft from Muan

Muan studmasters Len and Peter Gibbs will offer 16 reds including nine polled bulls at Rockhampton Brahman Week Sale.

The bulls, which sell under the Muan and Muan A prefixes, are catalogued as Lots 726-741.

The Gibbs brothers said Lot 726, Muan A Manipulator, was the standout bull in the quality draft.

“He is a well balanced bull with a strong sirey polled head and impeccable temperament,” they said.

Manipulator is by Mt Callan Govenor, and his grand-dam is the mother of Muan Hercules who sold for $50,000 at Brahman Week in 2007.

Lot 730, Muan A Max, is another young bull of note, being a half-brother to Muan A Indus who sold for $25,000 at RBWS in 2008.

Several bulls in this year’s draft are out of leading donor dams Muan 1697 and 1698, both by Tartrus Redmount, and Muan 1660, who is by Lanes Creek Red Ranger. These cows all share a common dam, Muan 1208, who is known as Wonder Woman because of her good results in the stud’s IVF and ET programs. Bulls from this dam line have been very successful at Brahman Week sales.

Other sires represented in this year’s draft include the South African import NCC Mboma, Huonfels Jacob Rio, Muan A Ironman, Muan A Jackpot, Valuce Red Prince and Muan Goliath 1700.

The Biggenden-based stud has been selling bulls at Brahman Week for more than 20 years.
Brahman Week offers biggest numbers and best value

POLLED RED GENETICS IN NESLO DRAFT

Andy and Marg Olsen are offering 12 bulls at Brahman Week from their Neslo stud, Taroom. The all red draft is catalogued as Lots 793 to 804, on Wednesday, October 3.

Marg Olsen said: “Last year we believed the bulls were overall the best draft of red sires we had offered for some time. However this year we consider they are even better, as they make up a more evenly matched group, all displaying depth, length and well developed beef characteristics.”

She said the stud’s focus was increasingly on polled genetics as well as tenderness and temperament.

“At Beef 2012, we had three good-natured young polled bulls on display by a sire in the top five percent for tenderness. In our draft for Brahman Week, we have six polled/scurred bulls, and of the two which were tested, one is in the top 10 percent and one in the top five percent for tenderness.”

Additional gene testing results will be available at the sale.

Nelso’s draft includes four sons of Billabong Campbell, whose four sons averaged $15,000 in 2008. Progeny of Cambell’s sons, Nelso Patriot, a dark red polled sire, and Nelso Caliber, a red nosed scurred bull, will also be up for grabs.

Those looking for polled bulls should consider Lots 796 and 797, by the large framed Alma Erik and out of dams by Billabong Prince.

The stud is also selling the first progeny of LB Mr Derringer Manso (imp).

All are quiet natured bulls and have been prepared mainly on buffel grass and leucaena over the past couple of years.

“They all come from fertile dam lines, as we aim to produce fertile functional cattle to suit any market,” Marg said.

For more information visit www.neslo.com.au

STRONG SECOND YEAR HOPES FOR RADELLA

Robert and Margot Mifsud will be offering bulls from their Radella stud at Sarina for the second year at Brahman Week.

The four greys go under the hammer as Lots 474-477 and are sired by JDH Modelo Manso 268/5 (imp) and JDH Nieto De Manso 646/3 (imp). All are ET progeny of FBC R Samantha Manso, who is by Nieto De Manso.

Margot Mifsud said they had sold six full brothers by Modelo Manso and out of Samantha Manso for an average of $11,416. Her pick of the Rockhampton draft is Lot 475, Radella Ben Manso 378, who is “not extreme anywhere, but exceptional everywhere.”

“Senator was shown at Beef 2012 and is out of an impressive Redmount cow with a terrific udder. He displays plenty of bone for a polled bull and carries loads of breed character and looseness.”

In addition to Senator, there are six other first sons of $50,000 NCC Essex to go under the hammer as part of the Rockley sale team.

Other sires represented in this year’s draft are NCC Kwai and Rockley Adidas. The Rockley team also features some notable dam lines.

“Our first two bulls in the draft are out of exceptional Redmount females,” Mr Kirk said.

Rockley Senator 2909 is out of Rockley 2389, and Lot 813, Rockley Receptor 2910, is out of Rockley 2393.

“Both dams are big, polled cows with excellent udders and are sired by JDH Datapack whose females have left a mark on the industry.”

Recent highlights for Rockley have included the purchase of two bulls last year in partnership with Ooline Brahmans: $15,000 NCC Sabre, who is by Topline General, and $40,000 NCC Diplomat, by JDH Mr Elmo Manso (imp).

Rockley has been selling at RBWS since its inception, recording a top of $60,000 in 2008 for the Tartrus Redmount son Rockley 2391.

ROSEWOOD HILL MAKES ROCKY DEBUT

Rosewood Hill Brahms, based at Greens Creek via Gympie, will be offering three red bulls at Rockhampton Brahman Week Sale, catalogued as Lots 833-835.

It is the first time the stud, run by Andrew Newcombe and daughter Tiffany, has offered bulls at Rockhampton.

Pick of the draft is Vendor’s Choice bull, Lot 833, Rosewood Hill Dazzler. Dazzler is a pink nosed, clean polled bull with lots of sire appeal.

“This bull has great length and depth as well as a tidy sheath and great testicular development,” Andrew Newcombe said.

“He is out of one of our top donor cows, Reldarah Bree, a Roseborough L Red Monte daughter. His sire, Fairy Springs Dazzler, is rated seven stars for tenderness by the Genestar rating.”

Mr Newcombe said two full sisters to Dazzler have been retained in the stud and are both donor prospects.

Also included in their draft is Rosewood Hill Windsor, a polled bull featuring imported blood and a double cross of Tartrus Redmount.

The scurred bull Rosewood Hill Mr Texan will also go under the hammer, and is by a Redmount grandson and out of a Lancefield D Diamontina cow.

The stud is sourcing quality females and using embryo transfer as a way of expanding the herd, with the focus on breeding high quality polled red Brahms.

HUDGINS-BLOOD GREYS FROM SHA ANN

Sha Ann Brahms, Traveston, have catalogued three grey bulls for RBWS this year, to go under the hammer as Lots 37-39.

Vendors David and Robyn Raymont have flagged Lot 37, Sha Ann Apache Gold, as the one to watch.

“Apache Gold is an upstanding sire type of excellent breed character and quality,” David Raymont said.

The 32-month-old PBF Hennessy Manso son weighs in at 1002kg with an eye muscle area of 137 sq cm and a scrotal circumference of 39cm. Apache is currently in the ABBA BIN Project. The growthy bull has also performed well in the show ring and was the supreme champion Brahman and interbreed runner-up at the Gympie Show in May.

Another draft pick is the two-year-old JDH Sir Shank Manso 51/7 (imp) son, Sha Ann Rolling Thunder, who boasts impressive growth and muscling.

Both of these bulls are out of daughters of the stud’s leading female, BCK Ele Wattle Manso 145, whose progeny have sold for up to $20,000.

“We think highly of her as she breeds quality every time, no matter what sire you use. All of her offspring have been Royal Show winners.”

All BCK Ele Wattle 145 females have been retained in the stud and have bred on.

Their third bull for RBWS, Lot 39 Sha Ann Roll the Dice, is by Mr V8 900/4 and is out of a Droonoodoo cow by FBC D Boston Manso.

The stud has had a successful year, taking home a handful of ribbons and plenty of great feedback on their cattle from Beef 2012.

Sha Ann has been selling at RBWS for five years with a top price of $20,000 recorded in 2008 for Sha Ann Ele Wise Man, who sold to Carinya stud.

Hudgins Blood from Solo and Solo F

Six greys featuring Hudgins genetics will be offered at Brahman Week under the Solo and Solo F prefixes.

Matthew and Fiona Noakes and Dave and Marie Simpson are offering sons of imports JDH Sir Alamo Manso, JDH Sir Winston Manso and JDH Sir Riddell Manso.

They are catalogued as Lots 200-205, with the pick of the draft being Lot 200 Solo F Chester.

Chester is an “exceptionally long and smooth” two-year-old son of JDH Sir Alamo Manso whose progeny are only just coming onto the market in Australia.

“Chester’s brother sold for $10,000 to Nogoa Pastoral Co, a repeat buyer of Solo bulls, at last year’s Brahman Week,” Matthew Noakes said.

“His dam, Solo F Miss Amethyst 1505, is the best cow in our stud. We flushed her for the first time last year and are very pleased to have five ET pregnancies from her due this season,” he said.

Lot 204, Solo Riverina 44, is out of $20,000 Clukan Riverdance 2nd, who is by JDH Navasota 55/1 (imp). Lot 205, Solo Victor 42, is also out of a Navasota female and is by JDH Riddell Manso (imp).

The stud is very happy with their progeny of JDH Sir Winston Manso, who has four sons catalogued.

Quality Red Genetics from Stockman

Chris McCarthy will offer six red bulls at Brahman Week from his Lockyer Valley-based Stockman stud.

Catalogued as Lots 869-874, the standout of the draft is Lot 870 Stockman Mr Rouge, by Mr JS Rouge 493/5 Red Neck (imp).

The cherry red polled bull exhibits a lovely softness, excellent feet and legs, good sheath and testicles and a “bomb proof” temperament, Chris McCarthy said.

His dam, Stockman Miss Fifi, is by Tartrus Redmount and has been the stud’s most successful home-bred cow, with 10 progeny sold to average more than $6000.

Lot 869, Stockman Red Man, and Lot 874, Stockman Matlock, are out of the stud’s top donor female, $17,000 Lancefield Matilda who produced the top priced heifer at the 2012 Fassifern Female Sale.

Lot 872, Stockman Mr Blue Rouge, is a fully imported American embryo by top sire HK Blueprint (imp) and out of Miss JS Rouge 489/5 (imp) who is a full sister to international champion Red Neck.

Stockman Mr Impressive, Lot 873, is out of Palmvale Fontenot Girl, a full sister to $44,000 Palmvale Dynamic, who was purchased by Tartrus.

Other sires represented in the Stockman 2012 draft include Mr Winchester Magnum 999 (imp), Lancefield D Impression and Rockley 1650.

Superb Female Bloodlines in TMB Draft

Grandsons of the record priced $60,000 female, FBC D Lady Lyn Manso, feature in the four head RBWS draft from Paul and Donna Taylor’s TMB stud, Goomeri.

The greys enter the ring as Lots 462-465, led by TMB Neptune De Manso, catalogued as Lot 462 for Brahman Week. The stud is offering four greys at the sale.
CLOSING DOWN SEMEN SALE

Brahman Week offers biggest numbers and best value

Another standout is Lot 463, TMB Alpha De Manso, who is a soft, easy doing bull with good bone and an excellent temperament.

All bulls are by JDH Alamo Manso 126/7 (imp) and JDH Sir Luigi Manso 434/7 (imp) and are the first grandsons of FBC D Lady Lyn Manso to be offered for sale.

Lady Lyn Manso was purchased at the Wilangi sale in 2006 and her daughters are performing extremely well in the stud’s IVF and ET programs.

The TMB prefix, which stands for Taylor Made Brahmans, sold in Rockhampton for the first time last year, peaking at $22,500.

CHAMPION GENETICS FROM WHITAKER

Exhibitors of this year’s grand champion bull at the “Ekka”, Clint and Robyn Whitaker, will be offering four bulls at Brahman Week including one of their top ribbon winners.

Lot 848, Whitaker Mr Pumpkin Magnate 1, was the junior champion bull at Beef Australia 2012, where he weighed in at 790kg at 18 months, with an eye muscle area of 126 sq cm.

Pumpkin Magnate is the sole red in the draft and is the first progeny of Whitaker Miss Pumpkin Dot Com to be offered for sale. She was the Beef 2009 calf champion female and the 2009 Brisbane junior champion female, and is out of the Register of Renown and three times ABBA Dam of the Year Whitaker Maggie.

“Whitaker Maggie has been naturally mated, artificially inseminated, embryo transferred and in vitro fertilised, with outstanding results,” Clint Whitaker said. “This line is fertile and offering this red sale bull gives an opportunity to acquire this fertility.”

The Mundubbera-based stud is selling three greys, as Lots 297-299, led by Whitaker Mr 373 who is the first bull to be offered at auction by Register of Renown and 2011 Sire of the Year, Eureka Creek Marksman.

“This is a sire prospect with plenty of power and red meat, in a very correct package. We strongly considered retaining this bull in our herd,” Mr Whitaker said.

Lot 299, Whitaker Ronald, placed fourth in his class at Beef Australia 2012 is by resident sire Garwin 1199 who sired this year’s Toowoomba Royal Show large breeds interbreed champion bull, Whitaker Yogi.

Whitaker stud has been selling at Brahman Week for five years, achieving a best result of $16,000 in 2011 for Whitaker Redmount.

The stud has had a very successful year in the show ring, culminating in Whitaker Mr Avo being named senior and grand champion bull in Brisbane. The prefix collected a swag of championships at 16 shows including the bull and female grand championships at Nanango Brahman Feature Show, where they also took home the interbreed championships and supreme exhibit award. Other wins included the reserve senior bull championship at Beef Australia 2012; supreme exhibits at Toowoomba, Bundaberg and Rockhampton; and the interbreed breeder’s group at Bell Show.

LARGE LINEUP OF REDS FROM YOMAN

Sixteen reds from Stewart and Stephanie Nobbs’ Yoman stud at Moura will take to the sale ring at RBWS.

They go up for auction as Lots 694-709 and include sons of NCC Ability, NCC Mashaba (imp ET), Abbotsford Acta and Broadlea Evermount.

Lot 701, Yoman 77/0, is the vendor’s favourite, described as being “structurally correct with a strong topline, plenty of length and a good red colour”.

The stud has been selling at Brahman Week for 25 years, achieving a top price of $44,000.

At Beef Australia 2012 a pen of 10 Yoman steers placed third in Class 8 for export steers 560-740kg with a maximum of four teeth.

Tackling delayed puberty in Brahmans

Research shows genes associated with late-onset puberty in heifers are also the same as those associated with late-onset puberty in bulls. This means that selecting either bulls or heifers for earlier puberty will also reduce age at puberty in their half-sibs.

There are major differences in cattle reproductive rates in northern and southern Australia, in part because the hardy Bos indicus breeds that dominate beef production in the tropics reproduce more slowly than the temperate Bos taurus breeds, particularly when they are suckling a calf.

In the harsh tropical environments where these breeds evolved, this was a desirable survival mechanism to ensure survival of the breed. However under current production systems in northern Australia, where management practices such as weaning of calves and supplementary feeding can be implemented, the poorer reproductive rates now represent a major inefficiency for the beef industry.

Beef CRC and CSIRO PhD researcher Marina Fortes says the major beef breed in Australia’s north, the Brahman, is much better adapted than the taurine breeds to high temperatures and humidity, parasites such as ticks, worms and buffalo flies and seasonally poor pasture quality during the dry seasons.

Under these conditions Brahman bull calves typically do not reach puberty before 18 to 24 months of age, much later than the taurine breeds. Tropical composite breeds like Belmont Red, Charbray, Santa Gertrudis, Brahman crossbreds and Senepol, comprising various admixtures of indicus and taurine genes and grazed at pasture in the tropics also reach puberty later than British bulls reared in temperate environments.

Ms Fortes studied veterinary science as an undergraduate at the University of Sao Paulo in Brazil, and came to Australia in 2008 with husband Laercio Porto Neto, who had won a PhD scholarship to work with Dr Bill Barendse at the Beef CRC.

Initially she worked for a year as a research assistant in the Animal Genetics Laboratory (AGL) at the University of Queensland, before successfully applying to also undertake PhD studies with the Beef CRC, supported by Meat and Livestock Australia.

Delayed puberty in Brahman and Tropical Composite breeds, in combination with the harsh production conditions, means most Brahman cows do not produce their first calves until they are at least three years old.

Ms Fortes is passionate about her research, because of its potential to boost the productivity of the beef industry in northern Australia, and in other tropical areas throughout the world.

Tackling delayed puberty in Brahmans

Her research has confirmed that some of the genes associated with late-onset puberty in heifers are also the same as those associated with late-onset puberty in bulls. This means that selecting either bulls or heifers for earlier puberty will also reduce age at puberty in their half-sibs.

Marina says reducing the age of puberty in Bos indicus and crossbred bulls to less than 12 months has potential to improve productivity, reduce production costs, and, by shortening the generation interval, accelerate rates of genetic gain for other desirable traits. But achieving rapid gains requires a radically new breeding strategy, based on high-precision genomics.

“As part of my PhD project, I used data from two herds of cows bred by the Beef CRC, one comprising 843 Brahmans and the other 866 Tropical Composite cows,” Marina said. “CRC researchers from the Animal Genetics and Breeding Unit (AGBU) had previously found there was a large variation in the age of puberty, particularly in Brahman heifers, indicating strong potential for genetic improvement. They had also found that age at puberty was highly heritable and related to other traits such as weight gain and body composition traits.”

“In addition to this field data, the CRC used the Illumina 50K SNP chip to genotype each animal.”

More recently, Beef CRC researchers used the Illumina 800K SNP chip to screen selected Brahman and Tropical Composite cows, as well as some bull calves born to the Brahman cows. Ms Fortes then cross-matched their SNP data with 22 measured traits recorded as part of the AGBU analyses to identify candidate genes for early puberty.

She found several SNP markers on chromosome 14 that were associated with the concentration of growth-promoting insulin-like Growth Factor-1 (IGF1) in blood samples of both the experimental bulls and heifers.

Cattle chromosome 14 turned out to be highly prospective: it carried several candidate genes for early puberty, known rather cryptically as PLAG1, XKRA, MOS and PENK.

PLAG1 is a transcription factor gene – a master regulator gene – that may control serum levels of IGF1. The PENK gene codes for an opioid receptor in the brain, known to be associated with fertility, while mice lacking a functional MOS gene are infertile.

Ms Fortes says the genes cluster within a 2-megabase (2 million DNA “letters”) region of chromosome 14, where the SNPs used for genotyping are too sparse to indicate which of the genes is the key player in early puberty. So the researchers are re-analysing the region with the high-resolution 800K SNP chip to see if they can pinpoint the exact gene causing the differences between animals in age at puberty.

The X chromosome is another hotspot for early puberty genes, especially genes that influence sperm quality and scrotum circumference, another predictor of early puberty. “It’s funny to think that the female chromosome is associated with male reproductive traits, but this is what we found,” Ms Fortes said.

Each key gene will contain at least one unique variation (a marker) in its DNA sequence that distinguishes it from all other variants of the same gene, i.e. the mutation that originally caused the functional change contributing to early puberty. A gene-testing kit to detect these markers will allow breeders to screen their breeding line for animals carrying the gene variants once they are identified.

Ms Fortes says the impact on herd reproduction rates from these advances in genomics will not be immediate. But beef producers in northern Australia will benefit as superior herd bulls selected for early puberty and high fertility progressively increase the calf output in their herds.

USING THE 800K CHIP

Genomics, the study of the organisation and function of a species’ full DNA sequence, allows molecular geneticists to pinpoint the very source of the differences between individuals of the same species, or breed.

Most genetic variation between individuals of the same species, or breed, traces to tiny differences in DNA sequence which subtly alter the function of the protein encoded by a gene, or change the way the gene functions. Most of these variations involve single nucleotide polymorphisms (SNPs – pronounced “snips”): single-letter substitutions that accumulate over evolutionary timescales through mutation.

Genomics technology company Illumina’s BovineSNP50 chip carries an array of 50,000 short DNA sequences from the spectrum of known SNPs from individual cattle. Beef CRC researchers have used it to screen the DNA of more than 10,000 animals in a technique called a genome-wide association study, or GWAS.

Whenever a DNA sequence on the chip detects a matching sequence in the DNA of one of the cows or bulls in the sample herd, the tiny patch of the chip carrying that SNP changes colour, confirming the cow has inherited that particular variation in the DNA sequence.

The chip reveals which variants or “alleles” of the DNA sequence every animal has inherited in 50,000 spots (SNPs). This reflects the extent to which the animals have inherited the same gene variants.

Checking shared SNP alleles against measurements of the full range of different carcass and meat quality, feed efficiency and reproduction traits in the test herds reveals associations between a particular trait, and particular SNPs that occur at high frequency in animals exhibiting the desirable aspect of the trait.

The location of every SNP on the chip is known accurately, from a chromosomal map of the cattle genome. When several SNP alleles from the same region of a particular chromosome consistently appear in animals that for example, reach puberty early but not in animals with delayed puberty, geneticists know an anonymous gene involved in early puberty lies nearby.

The closer the SNP to the desirable gene variant, the more likely they are to be inherited together. Rarely, a SNP marker will actually lie within the gene of interest, so its presence guarantees the animal carries the “gold standard” allele of the gene. It is ready-made for inclusion in a commercial gene-testing kit to rapidly identify animals with the potential to produce early-breeding progeny.
BEEF COUNTRY
BRAHMAN BULL SALE - NEBO
Friday, 16th November 2012
FOLLOWING THE BULL SALE
Packages includes 2 straws & 2 Authorisations from each

Lot 1: REDS x 12 Straws
2 x Lanes Creek Red Hector
2 x Tartru X Calibre
2 x Lancefield D Revaluation
2 x NCC Mbeki
2 x Winchester Magnum 999

Lot 2: GREYS x 12 Straws
2 x Mr V8 473/6
2 x Lancefield Marsden
2 x JDH Roanoke Manso 878
2 x PBF Harper
2 x PBF Eumundi

*Extra Authorisations to be negotiated with the vendors

Thanks to: BEEF BREEDING SERVICES, ELDERS, LANDMARK

</table>
How to attract more young people to the agricultural sector is a hot topic in the industry at the moment. While there is concern that there are not enough agribusiness graduates coming out of Australian universities to fill the vacancies the sector has, there are still plenty of examples of passionate, intelligent young people who are keen to make a career in agriculture.

Take Gemma Lomax, for instance. Gemma works for Wellard Rural Exports and is in charge of that firm’s livestock operations throughout northern Australia. She is in charge of co-ordinating the logistics, the preparation of cattle and the loading of livestock vessels bound for South-East Asian markets.

Gemma, 26, said she loved the industry and that even during the live export ban she never considered leaving the industry, despite having to sit in an office for six weeks due to no shipments.

Another reason Gemma moved into the live export field was her love for working with Brahman cattle. She moved north from her birthplace of South Australia, where her parents ran a dairy farm on the Fleurieu Peninsula, after she completed a degree in agriculture at Roseworthy University in Adelaide and has never looked back.

So what is it about the Brahman cattle which made her move from one end of the country to the other?

“I don’t know, they are just great cattle,” Gemma said.

“They have plenty of attitude, they are very hearty, very loveable, just the whole animal plus the lifestyle and weather in the north of Australia is just amazing.”

In terms of her day-to-day duties, Gemma looks after everything on the Australian end of the shipping process, other than the buying of the cattle.

“I have a contract buyer who does that and I co-ordinate with all of stakeholders that are involved in loading the ship such as stevedores, truck drivers, depot operators, port authorities and anybody else who needs to know what we are doing,” she said.

“Then the Australian Quarantine Inspection Service (AQIS) vets come out and do the final inspections and the final paperwork and documentation.

“It’s a logistics role which keeps me very busy.”

Gemma looks after all the cattle bound for South East Asian markets.

“That entails is everything from booking quarantine facilities to inspecting the cattle as they come in for quarantine, organising the vet for the protocol, organising anything which needs to go on board, organising our stockman, right through to the paperwork and meeting all of the importing country requirements,” she said.

Gemma travels to any Australian port where cattle are shipped to her markets and so far it has taken her to places such as Broome, Wyndham, Darwin, Fremantle and Townsville.

Gemma said the Federal Government’s sudden ban on livestock exports last year had a big impact on the whole industry.

“I think it hurt everybody on a personal level as well as a commercial level,” she said.

“Anybody who is in this industry is passionate about their lifestyle and their cattle.

“I mean people don’t farm cattle and breed cattle just to see them treated cruelly.

“So everybody was distraught over that and I was no different.”

Gemma said she was disappointed in the way industry handled the situation.

She said it didn’t seem to come back at the activists and show any of the positives of live export, which she knows are there.

“We made a mess of that but we learnt from it,” she said.

“I think it was overdue some of the stuff which we have now implemented, such as the Exporter Supply Chain Assurance System (ESCAS), which is absolutely amazing.

“It has just been a really big change. It’s been a massive increase in workload in terms of paperwork and traceability but I think it is all warranted.

“I think if we are going to be world leaders in live export, then why not do it the hard way and implement it overnight as we have done.”

Gemma covers the Australian side of ESCAS before the cattle are handed over to the importer.

That then leads to the feedlots and to the abattoirs, the next part of the ESCAS.

Gemma said the industry was going to be more sustainable over the longer term because of the new system.

“I think it was something which we weren’t doing a lot of in the north of Australia, in terms of recognising cattle from RFID’s and tracing them back to properties of origin,” she said.

“It was definitely there with the NLIS database and the rules around NLIS, but it wasn’t compulsory to tag cattle which were going for export - but now it is.

“That has been a big change for vendors who were primarily focused on export.

“There had been a few teething problems but that has all been ironed out one year in and everybody is doing a really good job now.

“Change is always difficult but I think everybody right throughout the whole supply chain has really taken it and said you know what, we are all in this to keep the industry alive and if this is what we have got to do then we are going to do it and we are going to do it well.”

Despite the hard battles over the past year, Gemma was positive about the industry’s future and her role within it.

“I am in it for the long haul,” she said.

“I love live export and I am as passionate about the other end as I am this end.”

Project kick-starts rollout of beef genomic breeding values

The owners of the animals involved in the CRC and MLA 3000 young animals project will be the first in Australia to receive the new genomic breeding values.

A new project launched by the Beef CRC and MLA to kick-start the commercial rollout of the Beef CRC’s genomic predictions for Australian beef cattle has been oversubscribed by breeders seeking to participate.

Beef CRC CEO Dr Heather Burrow said the number of subscribers to the 3000 young animal project reflected growing confidence in the industry in the value of genomics to predict commercially important traits.

"With the genomic prediction equations developed from the new 700K SNP chips, we will deliver a world-first product to identify the genetic qualities for hard-to-measure production and reproduction traits across breeds," Dr Burrow said.

The accuracy of the new blended genomic breeding values, which include hard-to-measure traits such as carcase and meat quality, net feed intake and male and female reproductive performance in tropical cattle, were released by Beef CRC Chief Scientist Professor Mike Goddard at the Beef Australia 2012 International Beef Cattle Genetics Conference in Rockhampton.

Dr Burrow said the value overall to the industry was to improve the accuracy of selecting the next generation of young sires.

"Once the genomic predictions have been calibrated in BREEDPLAN, the technology will help Australian producers increase their rates with genetic gain," she said.

"The critical thing is that this product has been developed and tested on Australian animals in Australian production systems."

Dr Burrow said the inclusion of genomic information would continue to improve breeding accuracies with increased levels of performance recording in industry herds.

"This is the path the Americans are taking and Australia has to do the same to keep the momentum going."

Dr Burrow said delivering the genomic prediction equations was a key milestone of the third round of Commonwealth funding for Beef CRC.

"By the time the CRC closes in June we will have met and, in some cases exceeded, all our funding milestones," she said.

Dr Burrow said the value overall to the industry was to improve the accuracy of selecting the next generation of young sires.

"By the time the CRC closes in June we will have met and, in some cases exceeded, all our funding milestones," she said.
"We have proven, beyond many people’s expectations, that selection can strongly influence fertility rates within a pure Brahman herd." Tim Schatz, Principal Pastoral Production Research Officer, NT Department of Resources.

Since 1994 a small team of researchers working with 90–150 breeder cattle have achieved impressive results in fertility rates in Brahman cattle in the Tropics. Veterinarian and researcher Gehan Jayawardhana began selecting for fertility traits in the NT Government’s Brahman stud (DDRS) at Douglas Daly Research Farm (DDRF) in 1994 and the work continues, now under the watchful eye of Principal Research Officer Tim Schatz and Research Officer Renee Rippon.

"We have proven, beyond many people’s expectations, that selection can strongly influence fertility rates within a pure Brahman herd," said Mr Schatz.

Selection pressure is put on both bulls and cows in the herd and has more than doubled yearling heifer conception rates compared to heifers from four commercial herds, each in four different seasons.

"Graziers in the Northern Territory have long accepted the lower fertility rates in Brahman cattle compared to Bos taurus breeds in other places," said Mr Schatz. "However, we are seeing much higher fertility in this herd as a result of our selection work and the industry is starting to show a strong interest in using our genetics."

Throughout the project the selection criterion have remained the same:

- Cows are culled from the herd if they don’t raise a calf to weaning each year. Raising a calf to weaning age each year proves maternal traits of calving ease, mothering ability and milk production while maintaining good body condition ready for reconception each year.
- Young bulls are selected at 12 months of age based on scrotal size, 400-day weight, per cent normal sperm, low age dam at calving and the dam’s ‘never miss a calf’ score. These bulls are retained in the herd for natural mating services.
- New genetics are carefully selected from herds that cull empty cows each year. Semen is used from bulls with low ‘days to calving’ and high scrotal size EBVs to AI 2-year-old heifers in the DDRS herd.
- Yearling mating is used to identify highly fertile females. Brahmans are notorious for taking longer to reach puberty than Bos taurus breeds. This selection technique favours individual females with smaller mature size that reach puberty earlier than the breed average.

The DDRS herd is now based at the Department’s Victoria River Research Station, 220 km south-west of Katherine. However, the weaner heifers are taken to the Douglas Daly Research Farm to grow-out until they are mated at 12 months of age. "Having the Douglas Daly property, situated 220 km south of Darwin, gives the heifers the best chance possible to reach target mating weight by 12 months of age," said Mr Schatz. "Douglas Daly is in the monsoonal zone, receiving 1200 mm mostly over the summer months. The fertile soils and high rainfall support improved buffel grass pastures for the heifers to graze. Growth rates are much higher than can be achieved at VRRS.*"

Impressive increase in Brahman fertility in NT case study

For four years heifers from the DDRS herd have been compared with yearling heifers purchased from a different, high quality commercial herd each year. Each year the two groups of heifers have been taken to DDRF as weaners, grazed separately but with the same level of nutrition, and mated as yearlings. Recent Beef CRC research has found that the average age at puberty of Brahman heifers is 750 days, which is why most northern graziers do not put the bulls with their heifers until two years of age. Heifers in the DDRS herd are expected to conceive by 450 days of age. The DDRS heifers have consistently achieved an average pregnancy rate of 65% compared to the 30% pregnancy rate in the commercial heifer groups.

“Commercial producers may find it difficult to do the level of herd recording we do to track the fertility of their heifers and cows,” Mr Schatz said, “but they can easily use fertility EBVs to help choose the bulls they use and this alone could make a big difference to herd fertility rates across the northern cattle industry.”

Mr Schatz has observed the trend of many producers to select bulls based more on their growth traits than their fertility traits. “Selecting for fertility in our herd has favoured animals with smaller mature size,” he said. “This means it is easier for our cows to stay in good condition and have a good chance of getting back in calf every year, even under the hot, harsh conditions on the native pastures at Victoria River.”

Obviously the research team have also kept track of the DDRS herd’s growth traits and Mr Schatz said that their steers have continued to compete well in feedlot trials with commercial steers.

“Our herd management is otherwise much the same as the industry norm,” said Mr Schatz. “We don’t muster the cattle any more than commercial operations but we probably do collect more information from our cattle while they are in the yards than many commercial operators would do. We also collect calving dates to comply with BREEDPLAN requirements.”

Using the NLIS tags, electronic readers and scales the team collects data on weight, body condition, pregnancy and lactation status of each cow.

The NT Government’s commercial herd of 600 breeders also runs on Victoria River Research Station. This herd provides a perfect ‘control’ line for the selection project since the DDRS herd was relocated to Victoria River in 2002. Reconception rates in lactating cows at the first weaning round muster in May have been, on average, 31% higher in the DDRS herd compared to the commercial herd.

Mr Schatz says that this shows the selection program is having a real impact on fertility in the herd. Figure 1 shows that prior to the selection project the DDRS herd was already below the industry average for days to calving EBV but when selection pressure was applied the response was immediate and dramatic, reducing this EBV by a further 4 units.

Similarly, the effect on scrotal size EBV was also immediate when selection pressure was applied to the DDRS herd. Prior to the project’s start the herd’s scrotal size EBV was similar to the Brahman breed average but has rapidly increased, raising this EBV by almost 2 units.

Mr Schatz and his team are currently building up the herd size using embryo transfer into cows in their commercial herd. “We are aiming to build the herd from about 150 breeders plus replacement heifers to around 300 breeders as quickly as possible,” said Mr Schatz.

The best bulls from the DDRS herd are kept in the herd and the rest are offered by tender to commercial producers. Mr Schatz said that increased interest in the DDRS genetic line had seen several enquiries about buying semen from the top bulls and also one of the larger pastoral companies undertaking embryo transfer to access the genetics and improve the fertility in their herd.

“Our work has demonstrated the value of selecting for fertility and the value of using the days to calving and scrotal size EBVs when selecting bulls,” said Mr Schatz. “Brahmans are always going to have a place in the north because they can handle the stressful environment but improving fertility rates have been long known as the key to improving profitability in northern grazing operations.”

Meat & Livestock Australia’s 2012 mid-year cattle projections update outlines the conditions that have kept Australia’s cattle supplies tight, while tough economic conditions in key export markets continue to put pressure on demand.

MLA Chief Economist Tim McRae said reduced cow slaughter and solid cattle prices have underpinned herd rebuilding activities in recent years, with demand the main challenge currently facing the Australian industry.

“While exports of beef and veal in 2012 are forecast to increase 1% to 960,000 tonnes swt, returns have been subdued in many markets, accentuated by the high A$ and problems in major world economies.”

Mr McRae said the outlook for demand still centres on the economic conditions in our established markets, which have been strained in recent years.

“Exports to Japan remain flat and exports to Korea are down 13% for the first half of 2012, as additional local and US product entered the market, at the same time as consumer demand declined.”

“The US market for Australian beef has rebounded in 2012, with exports up 46% for the first half of 2012, to 118,120 tonnes swt, with total shipments for the year forecast to reach 250,000 tonnes swt. The majority of the growth has been in manufacturing beef, with the higher prices in the US attracting shipments away from other markets such as Russia and Japan.”

Mr McRae said economic problems in our developed markets currently outweigh the benefits to be had from increased demand from emerging markets and the tight global supply of beef.

“Increasing demand from the growing middle class in developing economies across the globe remains a positive for Australian beef. This is currently being offset, however, by continued tough economic conditions and weak consumer sentiment in our developed markets – Japan and Korea.”

“Beef is currently at a price point in many markets that makes it difficult to compete with cheaper proteins, at a time when consumers are price conscious.”

Exports to Russia for 2012 have been revised back to 55,000 tonnes swt, along with lower expectations for volumes to Indonesia. However sustained demand from Taiwan and the Middle East, along with an improvement in access for Australian grainfed beef to the EU will assist shipments in the second half of 2012 and into 2013.

Symptomatic of the slower economic activity, especially at retail, the amount of beef destined for the Australian market for 2012 is unchanged on previous forecast, at 740,000 tonnes cwt - up slightly on 2011 due largely to increased production.

The forecast for live cattle exports remains unchanged at 570,000 head, 16% lower than 2011, with 283,000 head or 55% shipped to Indonesia.

BEEF prices in Indonesia are on the rise. In a typical supply and demand principle, less beef from Australia has meant a shortage in beef in the local market, which has led to a sharp rise in price in the last month.

Beef prices usually stand at about IDR 70,000 a kilogram but in the last month have risen 20 per cent to IDR85,000/kg.

The price rise may not seem like much but when compared to the average wage in Indonesia of IDR90,000 per day, the cost of living is tight.

Locals believe the dramatic price rise is in direct relation to the live cattle import quota which was almost halved from 410,000 head of cattle last year to just 283,000 in 2012.

When Farm Weekly travelled to a wet market in Lampung and spoke to some locals they admitted they could buy frozen beef cheaper (IDR60,000/kg) but frozen beef was not a crowd favourite.

Most locals bought meat which they could buy and eat that day, or in the case of Ramadan, that night.

The typical Indonesian does not own a refrigerator and the meat comes straight from the abattoir after it has been killed the night before or that morning.

Beef was also priced much higher than other meats such as chicken which was selling for IDR38,000/kg or ‘Simba’ fish (a standard fish in Indonesia) which was IDR25,000/kg.

Locals said about 70pc of the beef which was purchased in Indonesia would be made into Bakso Beef Balls. Bakso is a traditional meat dish in Indonesia but locals said beef prices were getting too expensive to even make the balls.

Some locals had already turned to buying some chicken and beef and using chicken in the middle of the ball and wrapping it in beef for a similar flavour, in an attempt to reduce costs.

Some industry sources in Indonesia believed beef prices could rise even more if the 98,000 head of cattle import permits are filled quickly, as the beef supply becomes scarcer.

Santori feedlot manager Zamzam Qodarrudin said the import quota was beginning to have a major effect on the market.

“We cut our import quota and now it is just 283,000,” Mr Qodarrudin said.

“The effect of that is only now starting to be realised because the price of beef has increased in the last month.

“They are increasing the price of meat because of the supply issues.” He said Bakso Balls could only be made using fresh meat and not frozen.

Santori marks 50,000 head milestone under ESCAS

It has been a year of challenges for Indonesia’s feedlot industry.

Since last year’s live export ban by Australia, Indonesian importers and lot feeders have had to deal with the strict implementation and additional cost of the Exporter Supply Chain Assurance Scheme (ESCAS), significant cutbacks in cattle import permits by Indonesia, the threat of a 5pc import duty on feeder cattle, and now a shortage of available cattle for the market from Australia due to the 350kg weight restrictions.

For one of Indonesia’s largest cattle importers, the Santori/Austasia group, the cost of implementing ESCAS has exceeded $800,000.

However, the vertically integrated importing, breeding, feeding, processing and retailing company is not complaining.

Instead it is planning a celebration.

Proud of what it has achieved under ESCAS, the company recently made the decision to invite the owner of the 50,000th head of cattle imported since the animal welfare assurance system was introduced to personally visit its diverse Indonesian supply chain.

The trip includes inspections of the company’s world-class feedlots, traceability systems, approved meat processing affiliates, and a visit to the wet market to meet end users and purchasers of Australian beef.

It was then simply a case of using the company’s triple back up traceability system to identify when the 50,000th animal arrived.

Santori’s Management Information System (MIS) identified that the milestone was achieved on May 1, 2012, when a 341kg Brahman cross steer from Australian Agricultural Company’s Brunette Downs arrived aboard Wellard Rural Export’s MV Ocean Drover at the port of Panjang near Lampung on the island of Sumatra.

The steer is on a 120-day feeding program at Santori’s Bekri feedlot and will be processed in the second week of September 2012.

Santori has provided the following details from its Management Information System on the 50,000th animal imported since ESCAS was implemented:

REPORT DATE: AUGUST 12, 2012

1. LNC number: # 4915
2. Date Approval by DAFF: April 16, 2012
3. Exported on: April 19, 2012
4. Exporter by: Wellard Rural Exports Pty. Ltd.
5. Name of Ship: MC Ocean Drover - V116
6. Loading port: Darwin
7. Health Certificate # NT 4321
8. Discharge Port: Panjang, Lampung - Indonesia
9. Arrival Date: May 1, 2012
10. Stevedores: PT Citra Karsa Mahesa
11. Trucking Operator: PT Skarshindo Sejahtera Harapan
12. Importer: PT Santosa Agrindo
14. No of Livestock Received (heads): 1,846
15. Induction Date: May 10, 2012
16. No of Livestock Inducted (heads): 1,846
17. RFID Replacements: 16 (0.86% from total shipment)
18. 180 Day Due Date: October 16, 2012

DETAIL OF # 50,000:

20. No. Ear tag: 33910XXXX
21. N.L.I.S.: TKBT0115XBG89699
22. Sex: Steer
23. Breed: Brahman Cross
24. POO: BRUNETTE DOWNS
25. Weight Induction (kgs): 341
26. Dentition: 0
27. Frame Score: 4
28. Fat Score: 2
29. Schedule to turn off: 2nd week of September 2012

31. Turn off Feedlot Date: .................................................................
32. Exit Weight (kgs): .................................................................

42. Day (Received - Kill): .................................................................
43. Carcass Yield (Wet market specification): .................................................................
Santori head of commercial beef feedlots, Guntur Pribadi, told Beef Central this week that a representative of AA Co will be invited to follow the animal’s movement through the supply chain in September.

He said that since ESCAS had been established, Santori had now imported more than 60,000 cattle to its supply chain, and wanted to use the 50,000 head milestone to show that the system was working.

“All the standard operating procedures in place will come under duress during these next few days due to the higher throughput,” he said yesterday.

“It is for this reason, all the senior managers are out there to give support to the animal welfare officers and the abattoir operators to uphold the standard.”

Santori is proud of the work they have done to comply with Australia’s wishes and feel that livestock number 50,000 is a chance to both showcase and celebrate a job well done by all breeders, shippers, feeders, and processors,” he said.

While the final week of Ramadhan is a time of religious celebration in Indonesia, Mr Pribadi said Santori’s senior management was on “high alert” instead of being on holiday.
The high Aussie dollar and wet weather have made their impact felt on Queensland beef markets over the previous few months.

“The beef industry’s biggest issue at the moment is we need to get the Australian dollar down,” said Rod Turner, Landmark Roma senior livestock manager and key account manager Western Queensland.

“It is affecting all areas of the industry and the economy in the bush at the moment in general.

“Basically, cattle are maintaining and have plateaued at a value, but expenses are almost over taking. So producers these days need to run lean, mean operations to stay in the industry.”

Having said that, Mr Turner commented that values remained reasonable through the Roma Saleyards despite having eased over the winter months.

“Up until last Friday we had 39 consecutive frosts. The country was so wet over summer and so now it has really dried things out, but we only need a good shower of rain to get us going again.”

At the August 21 Roma sale Brahmans held their own, with older heifers averaging $750 and smaller 180-220kg Brahman feeder heifers selling to 195c/kg.

NORTH QLD

CHARTERS TOWERS

Geaney’s Livestock yarded 3151 cattle at a special store sale in Charters Towers on July 6, with some top quality lots presented. Ibis Creek Pastoral Co, Ibis Creek, Charters Towers, sold a line of 140 high grade grey Brahman p.t.i.c. heifers to a top of $820 to average $740.

CENTRAL QLD

BLACKALL

Ray White Livestock Blackall has noticed consistent good prices for Brahman feed cattle 400-500kg over the scales in recent sales.

“Lot feeders are still pursuing well fed Brahman cattle and they are still performing well in feedlot situation,” said Paton Fitzsimons, director Ray White Livestock Blackall.

“The beef industry’s biggest issue at the moment is we need to get the Australian dollar down,” said Rod Turner, Landmark Roma senior livestock manager and key account manager Western Queensland.

“Basically, cattle are maintaining and have plateaued at a value, but expenses are almost overtaking. So producers these days need to run lean, mean operations to stay in the industry.”

Having said that, Mr Turner commented that values remained reasonable through the Roma Saleyards despite having eased over the winter months.

“Up until last Friday we had 39 consecutive frosts. The country was so wet over summer and so now it has really dried things out, but we only need a good shower of rain to get us going again.”

At the August 21 Roma sale Brahmans held their own, with older heifers averaging $750 and smaller 180-220kg Brahman feeder heifers selling to 195c/kg.

NORTH QLD

CHARTERS TOWERS

Geaney’s Livestock yarded 3151 cattle at a special store sale in Charters Towers on July 6, with some top quality lots presented. Ibis Creek Pastoral Co, Ibis Creek, Charters Towers, sold a line of 140 high grade grey Brahman p.t.i.c. heifers to a top of $820 to average $740.

CENTRAL QLD

BLACKALL

Ray White Livestock Blackall has noticed consistent good prices for Brahman feed cattle 400-500kg over the scales in recent sales.

“Lot feeders are still pursuing well fed Brahman cattle and they are still performing well in feedlot situation,” said Paton Fitzsimons, director Ray White Livestock Blackall.

“On a weekly basis export weight Brahman and Brahman cross cattle are near the top of results in Blackall saleyards every week.

“It’s been a long, cold and hard winter – we are left with a big body of dry feed with declining protein, but we are probably only an inch away from getting a good green shoot coming through again. And the temperatures are warming up again.”

Going back to mid July there were some top quality yardings processed through the saleyards.

The July 26 sale yarded 4526 head. Among the highlights was a sale by the Maxwell family, Hazelwood, Longreach, who sold heavy boned Brahman steers to average 178c and return $703.

The August 2 sale brought 3243 to the Blackall saleyards in what was the biggest yarding of prime cattle for 2012. Strong processor and lot feeder demand pushed prices firm to dearer. The Gillies family, Devenish, Blackall, sold 615kg Brahman bullocks for 171c/kg to return $1047.

Tim Salter, branch manager Elders Longreach, said prices had eased a little compared with the same period last year.

“For example the fat market has been a little softer because of heavier weights coming through and numbers coming through from the north as a flow-on affect from live export issue,” he said.

Four to five rain affected weeks have also pushed more concentrated numbers through the yards.

“In the past eight weeks we have been consistently yarding 3,500 to 5000 head.”

On a positive note, despite the cold winter there has been little deterioration instock quality.

“We have an extremely good level of feed and our protein is pretty good here in comparison to other years.

“There is still green feed in quite a few areas and as soon as the odd spot dried out we had a bit of rain and it freshened it up again.”

The rain most affected sales toward the end of June and into July, as was evident at the June 27 sale when only 1800 head were yarded.

Among the vendors were Shane and Monique Rayment, Swanvale, Jundah, who sold 550kg Brahman bullocks to 170c/$936.

A yarding of 5323 head met a slightly softer meatworks market on July 25. The market eased due to the sheer number presented.

Belfast Investments, Belfast, Winton, sold a large run of 517kg Brahman bullocks for 173c to return $895, and 405kg Brahman steers to 175c/$710. They also sold 621kg Brahman cows for 141c to realise $877 and 484kg Brahman heifers for 161c/$780.

The Currans, Talleyrand, Longreach, sold 419kg Brahman heifers for 131.2c/$550.

A reduced yarding of 3200 on August 1 met with a softer market, with Brahman cows and calves making $818.

Amongst the sales was Argyle Pastoral Co, Longreach, who sold a large run of 499kg Brahman bullocks to top 175c and return $850 per head, and 464kg Brahman steers for 164c/$762.

Cam and Julie Maxwell, Hazelwood, Longreach, sold 577kg Brahman bullocks for 164c to return $948.

A total of 4500 prime cattle were offered on August 8 and again prices remained easier. Bullocks over 600kg sold to 172c/kg.

A large offering of Brahman feed heifers put pressure on the market with Brahman heifers selling from 140c-150c.

Belfast Investments, Violet Station, Winton, sold a run of 176 Brahman bullocks to top at 171.2c to return $978/head.

GRACEMERE

Falls of 10-50mm of rain fell over most of the local area leading to a smaller yarding of only 440 head at the Gracemere sale on June 29. Among the vendors was Bob Beak, Carrara, Calliope, who sold 649kg grey Brahman bullocks for 165.2c to return $1072.

A rain-affected, very mixed yarding of 770 head was presented for sale on July 20. There was strong competition for all descriptions with prices fully firm to dearer.
on the sale two weeks previous. Among the offering were 211kg Brahman steers offered by Rob Jenkinson, Ubobo, which made 208c to return $439.

The August 3 sale yarded 4000 head, including a one-vendor line of 664 head.

Among the vendors were Joe and Rachael Olive, Marlborough, who sold Brahman weaner steers, weighing 245kg, to top at 220c/kg.

SOUTH QLD

GYMPIE

A smaller rain affected yarding of 500 cattle were offered at the Sullivan Livestock Gympie sale on July 16. The market was firm to dearer across the board. Tiloma Pastoral, Sexton, sold Brahman steers for 184c to return $642.

BIGGENDEN

Burnett Livestock and Realty’s second Biggenden special weaner sale for 2012, on July 5, attracted 2160 head with the market holding strong.

The winner of the Brahman infused class on the day was Double Diamond Rural, Rosedale. Its winning 284kg Brahman steers made 190.2c/kg to return $540/head.

A. and A. Trigger, Biggenden, sold Brahman steers to average 208.1c and return $490.

MURGON

Values in Murgon were firm on previous weeks at the store sale yarding on July 10. Export cattle were in short supply with the majority of the yarding being weaner and aged cattle. Among the prices recorded, local 400kg Brahman heifers sold to feedlot operators for 169c to return $672.

MIRIAM VALE

A smaller yarding of 460 head met a firm to strong market on July 10. Cashing in on the prices was Steve Busby, Builyan, who sold No. 2 Brahman steers for $460. The Bode family, Miriam Vale, sold Brahman weaner steers for $465. Bigger weaner steers sold from $400-$480, while smaller types sold from $300-$400.

MONTO

Reduced numbers of 430 head were gathered at Monto Cattle and Country fortnightly prime and store sale on July 25. Competition was strong and resulted in prices for bullocks rising 10c and cows 10-12c.

Bobby and Anne Dillon sold 510kg Brahman trade steers for 190c to realise $970. Ken Ball, Tiverton, Bancroft sold No.0 Brahman steers weighing 414kg for 188c to return $780.

GIN GIN

A total of 553 store cattle were yarded to a strong and dearer market at Elders Gin Gin sale on July 30.

Jim and Jenny Bauer sold a quality line-up of 200 mostly grey Brahman No.2 weaner steers for $500-$580/head.

John McCarney, Bucca Station, sold 77 weaner No.2 Brahman steers to $535 to average $509. Hillbrook Cattle Co. sold 20 No.1 grey Brahman steers for $630. The lighter, younger Brahman steers sold from $440-$480.

The Clark family, Bucca, sold red Brahman weaner steers for $540 and a pen of well-grown red Brahman weaner heifers for $425.
